Fiery X40 Color Server

CONFIGURATION GUIDE

FCC Information

WARNING: FCC Regulations state that any unauthorized changes or modifications to this equipment not expressly approved by the manufacturer could void the user's authority to operate this equipment.

Class A Compliance

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, and uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause interference in which case the user will be required to correct the interference at his own expense.

Industry Canada Class A Notice

This Class A digital apparatus complies with Canadian ICES-003.

Avis de Conformation Classe A de l'Industrie Canada

Cet appareil numérique de la Classe A est conforme à la norme NMB-003 du Canada.

Certificate by Manufacturer/Importer

This is to certify that the FC07 is shielded against radio interference in accordance with the provisions of VFG 243/1991. The German Postal Services have been advised that this device is being put on the market and that they have been given the right to inspect the series for compliance with the regulations.

Bescheinigung des Herstellers/Importeurs

Heirmit wird bescheinigt, dass der FC07 im Uebereinstimmung mit den Bestimmungen der VFG 243/1991 Funk-Entstort ist. Der Deutschen Bundespost wurde das Inverkehrbringen dieses Geraetes angezeigt und die Berechtigung zur Ueberpruefung der Serie auf Einhaltung der Bestimmungen eingeraumt.

RFI Compliance Notice

This equipment has been tested concerning compliance with the relevant RFI protection requirements both individually and on system level (to simulate normal operation conditions). However, it is possible that these RFI Requirements are not met under certain unfavorable conditions in other installations. It is the user who is responsible for compliance of his particular installation.

Dieses Geraet wurde einzeln sowohl als auch in einer Anlage, die einen normalen Anwendungsfall nachbildet, auf die Einhaltung der Funk-entstoerbestimmungen geprueft. Es ist jedoch moeglich, dass die Funk-enstoerbestimmungen unter unguenstigen Umstaenden bei anderen Geraetekombinationen nicht eingehalten werden. Fuer die Einhaltung der Funk-entstoerbestimmungen seigner gesamten Anlage, in der dieses Geraet betrieben wird, ist der Betreiber verantwortlich.

Compliance with applicable regulations depends on the use of shielded cables. It is the user who is responsible for procuring the appropriate cables.

Einhaltung mit betreffenden Bestimmungen kommt darauf an, dass geschirmte Ausfuhrungen gebraucht werden. Fuer die beschaffung richtiger Ausfuhrungen ist der Betreiber verantwortlich.

Software License Agreement

Before using the Software, please carefully read the following terms and conditions. BY USING THIS SOFTWARE, YOU SIGNIFY THAT YOU HAVE ACCEPTED THE TERMS OF THIS AGREEMENT. If you cannot or do not accept these terms, you may return the entire package within ten (10) days to the Distributor or Dealer from which you obtained them for a full refund.

Electronics For Imaging grants to you a non-exclusive, non-transferable license to use the software and accompanying documentation ("Software") included with the Fiery X40 you have purchased, including without limitation the PostScript software provided by Adobe Systems Incorporated.

You may:

a. use the Software solely for your own customary business purposes and solely with Fiery X40;

b. use the digitally-encoded machine-readable outline and bitmap programs ("Font Programs") provided with Fiery X40 in a special encrypted format ("Coded Font Programs") to reproduce and display designs, styles, weights, and versions of letters, numerals, characters and symbols ("Typefaces") solely for your own customary business purposes on the display window of the Fiery X40 or monitor used with Fiery X40;

c. use the trademarks used by Electronics For Imaging to identify the Coded Font Programs and Typefaces reproduced therefrom ("Trademarks"); and

d. assign your rights under this Agreement to a transferee of all of your right, title and interest in and to Fiery X40 provided the transferee agrees to be bound by all of the terms and conditions of this Agreement.

You may not:

a. make use of the Software, directly or indirectly, to print bitmap images with print resolutions of 600 dots per inch or greater, or to generate fonts or typefaces for use other than with Fiery X40;

b. make or have made, or permit to be made, any copies of the Software, Coded Font Programs, accompanying documentation or portions thereof, except as necessary for use with the Fiery X40 unit purchased by you; provided, however, that under no circumstances may you make or have made, or permit to be made, any copies of that certain portion of the Software which has been included on the Fiery X40 hard disk drive. You may not copy the documentation;

c. attempt to alter, disassemble, decrypt or reverse engineer the Software, Coded Font Programs or accompanying documentation.

d. rent or lease the Software.

Proprietary Rights

You acknowledge that the Software, Coded Font Programs, Typefaces, Trademarks and accompanying documentation are proprietary to Electronics For Imaging and its suppliers and that title and other intellectual property rights therein remain with Electronics For Imaging and its suppliers. Except as stated above, this Agreement does not grant you any right to patents, copyrights, trade secrets, trademarks (whether registered or unregistered), or any other rights, franchises or licenses in respect of the Software, Coded Font Programs, Typefaces, Trademarks or accompanying documentation. You may not adapt or use any trademark or trade name which is likely to be similar to or confusing with that of Electronics For Imaging or any of its suppliers or take any other action which impairs or reduces the trademark rights of Electronics For Imaging or its suppliers. The trademarks may only be used to identify printed output produced by the Coded Font Programs. At the reasonable request of Electronics For Imaging, you must supply samples of any Typeface identified with a trademark.

Confidentiality

You agree to hold the Software and Coded Font Programs in confidence, disclosing the Software and Coded Font Programs only to authorized users having a need to use the Software and Coded Font Programs as permitted by this Agreement and to take all reasonable precautions to prevent disclosure to other parties.

Remedies

Unauthorized use, copying or disclosure of the Software, Coded Font Programs, Typefaces, Trademarks or accompanying documentation will result in automatic termination of this license and will make available to Electronics For Imaging other legal remedies.

Limited Warranty And Disclaimer

Electronics For Imaging warrants that, for a period of ninety (90) days from the date of delivery to you, the Software under normal use will perform without significant errors that make it unusable. Electronics For Imaging's entire liability and your exclusive remedy under this warranty (which is subject to you returning Fiery X40 to Electronics For Imaging or an authorized dealer) will be, at Electronics For Imaging's option, to use reasonable commercial efforts to attempt to correct or work around errors, to replace the Software with functionally equivalent software, or to refund the purchase price and terminate this Agreement. Some states do not allow limitations on duration of implied warranty, so the above limitation may not apply to you.

Except for the above express limited warranty, Electronics For Imaging makes and you receive no warranties or conditions on the Products, express, implied, or statutory, and Electronics For Imaging specifically disclaims any implied warranty or condition of merchantability or fitness for a particular purpose.

For warranty service, please contact your authorized service/support center.

EXCEPT FOR THE ABOVE EXPRESS LIMITED WARRANTY, ELECTRONICS FOR IMAGING MAKES AND YOU RECEIVE NO WARRANTIES OR CONDITIONS ON THE SOFTWARE OR CODED FONT PROGRAMS, EXPRESS, IMPLIED, STATUTORY, OR IN ANY OTHER PROVISION OF THIS AGREEMENT OR COMMUNICATION WITH YOU, AND ELECTRONICS FOR IMAGING SPECIFICALLY DISCLAIMS ANY IMPLIED WARRANTY OR CONDITION OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Electronics For Imaging does not warrant that the operation of the software will be uninterrupted or error free or that the Software will meet your specific requirements.

Limitation Of Liability

IN NO EVENT WILL ELECTRONICS FOR IMAGING OR ITS SUPPLIERS BE LIABLE FOR ANY DAMAGES, INCLUDING LOSS OF DATA, LOST PROFITS, COST OF COVER OR OTHER SPECIAL, INCIDENTAL, CONSEQUENTIAL OR INDIRECT DAMAGES ARISING FROM THE USE OF THE SOFTWARE, CODED FONT PROGRAMS OR ACCOMPANYING DOCUMENTATION, HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY. THIS LIMITATION WILL APPLY EVEN IF ELECTRONICS FOR IMAGING OR ANY AUTHORIZED DEALER HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGE. YOU ACKNOWLEDGE THAT THE PRICE OF THE UNIT REFLECTS THIS ALLOCATION OF RISK. BECAUSE SOME STATES/JURISDICTIONS DO NOT ALLOW THE EXCLUSION OR LIMITATION OF LIABILITY FOR CONSEQUENTIAL OR INCIDENTAL DAMAGES, THE ABOVE LIMITATION MAY NOT APPLY TO YOU.

Export Controls

You agree that you will not export or re-export the Software or Coded Font Programs in any form without the appropriate United States and foreign government licenses. Your failure to comply with this provision is a material breach of this Agreement.

Government Use

Use, duplication or disclosure of the Software by the United States Government is subject to restrictions as set forth in subdivision (c) (1) (ii) of the Rights in Technical Data and Computer Software clause at DFARS 252.227-7013 or in subparagraphs (c) (1) and (2) of the Commercial Computer Software—Restricted Right Clause at 48 CFR 52.227-19, as applicable.

Third Party Beneficiary

You are hereby notified that Adobe Systems Incorporated, a California corporation located at 345 Park Avenue, San Jose, CA 95110-2704 ("Adobe") is a third-party beneficiary to this Agreement to the extent that this Agreement contains provisions which relate to your use of the Fonts, the Coded Font Programs, the Typefaces and the Trademarks licensed hereby. Such provisions are made expressly for the benefit of Adobe and are enforceable by Adobe in addition to Electronics For Imaging.

General

This Agreement will be governed by the laws of the State of California.

This Agreement is the entire agreement held between us and supersedes any other communications or advertising with respect to the Software, Coded Font Programs and accompanying documentation.

If any provision of this Agreement is held invalid, the remainder of this Agreement shall continue in full force and effect.

If you have any questions concerning this Agreement, please write to Electronics For Imaging, Attn: Licensing Dept. or see Electronics For Imaging's web site at www.efi.com.

Chapter 3: Performing Setup from the Control Panel

Chapter 4: Setting up the Fiery X40 from a Windows Computer

Chapter 5: Setting up Network Servers

Chapter 6: Administering the Fiery X40

Appendix A: Token Ring Network Option

Index

Introduction

This manual is intended for anyone who is responsible for integrating the Fiery X40 Color Server™ into a business environment that includes networked personal computers. After you set up the Fiery X40 Color Server and client workstations as described in this manual and in *Getting Started*, individual users can print to the Fiery X40 Color Server as a high-performance color Adobe PostScript printer.

NOTE: The term "Fiery X40" is used in this manual to refer to the Fiery X40 Color Server. The name "Aero" is used in illustrations to represent the Fiery X40.

The Fiery X40 supports the DocuColor 40 color copier.

The Fiery X40 includes support for the Fiery WebTools™ and software for the Command WorkStation™, which enable an operator to manage all jobs sent to the Fiery X40. Although it may not be the case at all sites, the documentation for this product assumes the presence of an operator who controls and manages jobs sent by users from remote workstations.

Any connectivity or administrative features specific to the copier are described in *Getting Started,* the *Printing Guide,* or the *Release Notes.*

About this manual

This manual covers the following topics:

• Basic configuration of the Fiery X40 to support printing over AppleTalk, TCP/IP, and IPX (Novell) networks

• Configuring Novell, Microsoft Windows NT 4.0, and Windows 2000 servers and UNIX systems to provide Fiery X40 printing services

• Administering network printing

• Using the Fiery X40 in mixed network environments

• Configuring the Fiery X40 to accept jobs through the parallel port

• Setting up a Token Ring connection

NOTE: The network guidelines in this book are not intended to replace the services of an experienced network engineer.

Organization

This manual is organized as follows:

- Chapter 1 illustrates the supported network configurations and shows the network connectors on the Fiery X40.

- Chapter 2 describes how to prepare for Fiery X40 Setup, including planning system security through access levels.

- Chapter 3 describes Fiery X40 configuration (Setup) from the Control Panel.

- Chapter 4 describes Fiery X40 Setup from a Windows computer.

- Chapter 5 provides guidelines for setting up Windows network servers and UNIX systems for printing to the Fiery X40 and for using the Fiery WebTools.

- Chapter 6 summarizes some administrative features of Fiery X40 software that are available for IPX/SPX, TCP/IP, and AppleTalk networks, and also offers some troubleshooting hints.

- Appendix A describes the Token Ring option.

NOTE: Administrator features described in other manuals are summarized on page 6-1.

About the documentation

This manual is part of a set of Fiery X40 documentation, which includes the following manuals for users and system administrators:

- The *Configuration Guide* explains basic configuration and administration of the Fiery X40 for the supported platforms and network environments. It also includes guidelines for setting up UNIX, Windows NT 4.0, and Novell NetWare servers to provide printing services to clients.

- *Getting Started* describes how to install software to enable users to print to the Fiery X40. Specifically, it describes installation of printer files, and other user software provided on the User Software CD. It also explains how to connect each user to the network.

- The *Printing Guide* describes the printing features of the Fiery X40 for users who send jobs via remote workstations on the network.

- The *Color Guide* provides information on managing the color output of your Fiery X40. It addresses concepts and issues associated with printing to the Fiery X40 and outlines key workflow scenarios. This manual explains how to calibrate your copier and take advantage of the ColorWise® color management system as well as features in ColorWise Pro Tools™. In addition, the *Color Guide* offers information on printing from popular Windows and Mac OS applications.

- The *Job Management Guide* explains the functions of the Fiery utilities, including the Command WorkStation, and how they can be used to manage jobs. This book is intended for an operator or administrator, or a user with the necessary access privileges, who needs to monitor and manage job flow, and troubleshoot problems that may arise.

- *Release Notes* provide last-minute product information and workarounds for some of the problems you may encounter.

Chapter 1: Connecting to the Network

This chapter summarizes the stages in setting up the Fiery X40, and includes diagrams that refer you to other chapters or other manuals for completing your installation. Check those references to find the information you need quickly.

Fiery X40 on the network

When the Fiery X40 is connected to a network, it behaves as a networked PostScript printer. The built-in Ethernet interface on the Fiery X40 supports the following network protocols:

- AppleTalk

- TCP/IP (the lpd, nbt, and http protocols)

  TCP/IP stands for Transmission Control Protocol/Internet Protocol. The lpd protocol is the standard TCP/IP printing protocol. The nbt protocol supports Windows (SMB) printing. The http protocol is commonly used for Web pages on the Internet and on intranets.

- IPX/SPX (Novell)

  IPX/SPX stands for Internetwork Packet Exchange/Sequenced Packet Exchange.

These protocols (rules that enable computers on a network to communicate with each other) are supported on the Mac OS, Windows, and UNIX platforms and can run concurrently on the same cable. Workstations that use other protocols can print through a server that uses one of the protocols mentioned. A Token Ring option is also available. This option supports the TCP/IP and IPX/SPX protocols. The Fiery X40 is auto-sensing, and can handle all of these connections simultaneously.

When you add the Fiery X40 to a network, it is assumed that a network administrator has already installed a network cabling system and connected workstations and servers.

Stages of installation on the network

Installation can be performed by a network or printing administrator. The stages of a successful installation are:

- **Physically connecting the Fiery X40 to a functioning network**

  Prepare a network node for the Fiery X40—obtain cable and route it to the location where the Fiery X40 will be installed (near the copier) and attach the cable to the network interface of the Fiery X40. See page 2-10 for details.

  NOTE: If you plan to run the Command WorkStation software, you will need to install the software and connect the Command WorkStation computer to the network along with the Fiery X40. See *Getting Started* for details.

- **Configuring the network server**

  When network servers are required, you need to configure those servers to provide client access to the Fiery X40 as a color PostScript printer. See Chapter 5 for information on configuring network servers in Windows and UNIX network environments.

- **Setting up the Fiery X40**

  Configure the Fiery X40 for your particular printing and network environment. First read Chapter 2, and then see the following chapters for details.

- **Preparing client workstations for printing**

  Install the files needed for printing, install additional user software, and connect the client to the Fiery X40 over the network. These steps are described in *Getting Started,* and some information is provided in Chapter 5 of this manual.

- **Administering the Fiery X40**

  Monitor and maintain system performance and troubleshoot problems that arise. See Chapter 6 and the *Job Management Guide* for details.

Summary of Fiery X40 network installation
CONNECTION	**Fiery X40**	Prepare a network node. Connect the Fiery X40 to the copier and to the network. If you use a computer running the Command WorkStation software, connect it to the network.
SERVER CONFIGURATION	**Network server**	Configure UNIX, Windows NT 4.0 and IPX (Novell) servers to specify Fiery X40 print queues and Fiery X40 users. Install PostScript printer files on the server. No special configuration of AppleShare servers is required.
FIERY X40 SETUP	**Fiery X40**	On the Fiery X40 Control Panel, configure at least the Server Setup, Network Setup, and Printer Setup. From the Control Panel, WebSetup, or the Command WorkStation, configure the remaining Setups. Calibrate the Fiery X40.
CLIENT SETUP	**UNIX Mac OS Windows**	At each workstation that will print to the Fiery X40: • Install the appropriate printer files and connect to one or more queues. • For computers that will use them, install Fiery utilities and an Internet browser. • Verify the Fiery X40 in the list of printers and run a test print.
Fiery X40 available on the network

1

Quick path to installation

The diagrams on the following pages show typical systems that can be used for printing and running Fiery software from remote workstations. Find the page with your preferred platform and network type, and then look up the setup procedures referenced in the "Key to setup" at the top left of each diagram.

The diagrams describe devices that use the supported networking protocols. They are logical diagrams and are not intended to describe the physical arrangement (topology) of devices on the network. A variety of physical arrangements is possible with each logical arrangement. For example, twisted pair Ethernet networks commonly use a star configuration around a hub, rather than a bus arrangement. The design of physical networks is beyond the scope of this manual.

If the network uses more than one protocol or more than one type of workstation, combine the setups listed for each component of your system. Multiple protocols (shown in the diagrams as parallel lines) can run on the same cable. A solid connection from the Fiery X40 with an arrow indicates that other supported network types can be operational at the same time.

A Token Ring card is required for connection to a Token Ring network. For more information, see Appendix A, "Token Ring Network Option."

NOTE: The IPX/SPX and TCP/IP functionality outlined in this section is available on both Ethernet and Token Ring networks. AppleTalk is supported on Ethernet only.

1
Connecting network cable to the Fiery X40

In this section, the back panel of the Fiery X40 is illustrated, followed by information for connecting to the Ethernet board. For information about connecting to a Token Ring network, see Appendix A, "Token Ring Network Option."

Shut down the Fiery X40 before attaching it to any network device. If the Fiery X40 has just finished processing, wait 5 seconds after the system reaches the Idle state before using the power switch to turn off the Fiery X40.

Back view of the Fiery X40

Copier interface connectors

Parallel port connector

10/100BaseT Ethernet (RJ-45)

1
Ethernet connection

For connecting to Ethernet, the Fiery X40 supports Unshielded Twisted Pair (UTP) cabling, defined as Category 5 for use with 100BaseT; or as Category 3, Category 4, or Category 5 for use with 10BaseT. The cable uses an 8-pin RJ-45 connector that plugs into the RJ-45 socket on the Fiery X40.

NOTE: The 100BaseT type supported by the Fiery X40 is 100BaseTX, also known as Fast Ethernet. If an Ethernet hub is used, it must be a 100BaseTX hub. The term "100BaseT" is used to refer to 100BaseTX.

TO CONNECT TO THE ETHERNET BOARD:

- **Connect the network cable to the RJ-45 connector on the back of the Fiery X40.**

   A Category 5 unshielded twisted pair cable network cable must be used for 100BaseT.

1

Parallel cable connection

In addition to receiving print jobs over Ethernet and Token Ring, the Fiery X40 can accept print jobs from a Windows computer through its high-speed parallel port. This connection is advantageous for portable computers and for workstations on dedicated networks using protocols other than AppleTalk, TCP/IP, or IPX.

The parallel port connection can be active at the same time as the network ports.

NOTE: The parallel port cannot be used to connect the Fiery X40 with the Command WorkStation or other Fiery utilities.

TO USE PARALLEL CABLE:

1. **With the Fiery X40 and the Windows computer turned off, attach the parallel cable to the parallel port of the Fiery X40.**

   See the illustration on page 1-11 for the location of the parallel port.

2. **Connect the other end of the cable to the parallel port on the Windows computer.**

3. **Turn on the computer and the Fiery X40.**

4. **Proceed to Setup.**

   To print to the parallel port, you need to set up the parallel port connection. See "Parallel Port Setup options" on page 3-13. For information on setting up printing, see *Getting Started*; for printing to the parallel port, see the *Printing Guide*.

**Chapter 2:
Preparing for
Fiery X40 Setup**

To prepare for printing at your site, you need to do some initial Fiery X40 configuration, or Setup, to specify the network environment and the kind of printing you will do. Before you perform Setup, you must decide the levels of access you will implement for your site. Administrators and operators must also understand how Fiery X40 system software is structured in order to configure and use the Fiery X40 system correctly.

Levels of access and control

When you configure the Fiery X40 during Setup, you (as system administrator) implement a particular level of control by enabling or not enabling print connections, passwords, and access to Fiery WebTools. The level of control you implement can range from strict to moderate to minimal—or none at all.

• Strictest control might be appropriate for a high-volume printing environment where an administrator or operator controls the job flow and all printing; jobs sent by users are spooled (stored) to the Fiery X40 disk until the operator decides it is time to print them. In addition, only the administrator and/or operator have access to job management tools.

NOTE: The term "job management tools" is used in this manual to refer to the Command WorkStation and Fiery WebSpooler.

• Least control might be appropriate for a small site where anyone on the local network can control all printing and Fiery X40 functions. Although there may be an administrator or operator charged with certain duties, all users have equal access to the system and job management tools.

Fiery X40 print connections

The Fiery X40 supports three print connections: Hold queue, Print queue, and Direct connection. These print connections can be enabled, or "published," to users on the network when you configure Printer Setup. All published connections are constantly checked for the presence of jobs. The Print queue and the Direct connection give remote users more direct access to the Fiery X40 than the Hold queue. Therefore, do not publish the Print queue and the Direct connection in environments where stricter control is desired.

In addition, you can enable the Printed queue, which is a storage area for the most recent jobs from the Print queue. The Printed queue makes it convenient to reprint those jobs. In Setup, you enable the Printed queue and specify the maximum number of jobs retained in it (see page 3-8). Reprinting jobs in the Printed queue requires the job management tools.

Hold queue

Jobs sent to the Hold queue are spooled to the Fiery X40 hard disk for printing at a later time or for repeated printing. Because the Hold queue is a storage place, jobs sent to it cannot proceed through the printing process without intervention via the job management tools (see the *Job Management Guide*).

Print queue

This is the standard Fiery X40 queue. Jobs sent to the Print queue are processed and printed in the order they are received. Jobs prioritized by an operator from the job management tools and jobs sent via the Direct connection can take priority over jobs sent to the Print queue.

To use the Fiery utilities and Fiery WebTools, you must enable either the Hold queue or the Print queue.

Direct connection

The Direct connection transmits jobs directly to the Fiery X40, but only when the Fiery X40 is not processing another job. If the Fiery X40 is busy, the job remains at the user workstation until the Fiery X40 is ready. The job is then processed as soon as the previous job is finished and before the next queued job is processed.

Jobs sent to the Direct connection are not stored on the Fiery X40 hard disk, and they cannot be selected for reprinting, moving, or deletion. Therefore, the Direct connection provides a measure of security for sensitive files. Jobs sent to the Direct connection *do* appear in the Job Log, for accounting purposes.

You cannot use the Direct connection for lpd printing over TCP/IP.

NOTE: To download fonts to the Fiery X40, you must publish the Direct connection.

Passwords

You can implement password requirements as a means of controlling access to Fiery X40 functions. The Fiery X40 allows for the following passwords to be set in Setup:

- Administrator—from the Control Panel, the Command WorkStation, or Fiery WebSetup

- Operator—from the Command WorkStation or Fiery WebSetup

NOTE: By default, *no* passwords are set on the Fiery X40. If you do not specifically set passwords, all users will have administrator privileges, which include access to important functions such as Setup (including setting passwords), and job control. It is *strongly recommended* that you set *at least* an Administrator password to protect the Fiery X40 from random or accidental changes to Setup.

Administrator privileges

Administrator control, which confers control of Setup, is the highest level of control, since the person who has access to Setup can control the printing and job management environment. Administrator privileges include publishing print connections, setting passwords, deleting fonts, clearing the Fiery X40 of all job data, performing calibration, and setting the WebLink destination.

When performing a function from the Fiery X40 Control Panel that prompts you for the Administrator password, you must enter it promptly. Otherwise, the Fiery X40 Control Panel returns to Idle, and you must start over again.

Operator privileges

Operator control includes control of print jobs from the job management tools, including the ability to override job settings.

Guest privileges (no password)

No password is needed for a user to log in as a Guest from the job management tools. A Guest can view the status of active jobs but cannot make changes to jobs or to the Fiery X40 state.

Fiery WebTools

The Fiery X40 can support Internet or intranet access with Fiery WebTools from Windows 95/98/2000, Windows NT 4.0, and Mac OS computers. To enable use of Fiery WebTools, you must do the following in Setup:

• Enable TCP/IP.

• Set an IP address, subnet mask, and gateway address for the Fiery X40.

• Enable Web Services.

Instead of manually assigning the IP address, subnet mask, and gateway address, you can use DHCP, RARP, or BOOTP protocols to assign some or all of these addresses (see page 3-15).

Passwords can be set to control access to Fiery WebTools features. If you do not specifically set these passwords, all users have access to all Fiery WebTools functions (see page 2-3).

Fiery WebTools include Status, WebSpooler, WebLink, WebDownloader, WebSetup, and Installer.

Status

The Status WebTool provides you with current information on the jobs processing and printing on the Fiery X40. It is not affected by any password setting. For more information, see the *Printing Guide*.

WebSpooler

The WebSpooler interface is very similar to that of the Command WorkStation. It allows remote users to preview, manipulate, reorder, reprint, and delete jobs currently spooling, processing, or printing on the Fiery X40. It also allows the administrator to use the DocBuilder tool (Thumbnails A and B) and to view, print, or delete the Job Log.

Fiery WebSpooler access can be controlled by setting an Operator password in Setup. If you set a password, only users with that password can manipulate jobs from Fiery WebSpooler. A user who does not have the password can still log in to Fiery WebSpooler as a Guest with view-only access (see page 2-3). For more information, see the *Job Management Guide*.

WebLink

WebLink provides all users with a link to a pre-set Fiery WebLink destination. To change the WebLink destination, see page 5-13. This function requires the Administrator password, if one has been set. See "Passwords" on page 2-3.

NOTE: If no Administrator password has been set, any user can change the WebLink destination, which affects all users. For this reason, it is strongly recommended that you set an Administrator password.

WebDownloader

WebDownloader allows you to download PostScript, PDF, and ASCII files directly to the Fiery X40 without first opening the file in an application.

WebSetup

WebSetup allows you to view and modify Fiery X40 Setup options from a remote workstation. For more information, see Chapter 4.

NOTE: Fiery WebSetup is supported on Windows 95/98/2000 and Windows NT 4.0 computers only.

Installer

The Installer WebTool allows users to download printer files installers directly from the Fiery X40. It is not affected by any password setting. For more information, see *Getting Started*.

Control level scenarios

Typical scenarios of access and control, ranging from least control to strictest control, are described in this section. Choose the scenario that best matches your site requirements, and then refer to the corresponding number in the table for guidance on how to configure your system for those requirements.

NOTE: It is *strongly recommended* that you set *at least* an Administrator password to prevent unauthorized changes to system settings.

1. **(Least control—*not recommended*) No designated administrator or operator**

   All users have equal access to all system functions including Setup, clearing the Fiery X40, deleting printer fonts, setting the WebLink destination, performing calibration, printing to all Fiery X40 print connections, and managing all jobs from the job management tools.

2. **A designated administrator but no designated operator**

   Only an administrator can perform Setup, calibration, and other administrator functions, but all other system functions are accessible to all users, including printing to all Fiery X40 print connections, and managing all jobs from the job management tools.

3. **A designated administrator and a superuser operator**

   Only an administrator can perform Setup, calibration, and other administrator functions, and only an operator or administrator can control jobs from the job management tools. Users can print to all Fiery X40 print connections.

4. **A designated administrator and a designated operator, no Fiery WebTool access**

   Only an administrator can perform Setup, calibration, and other administrator functions, and only an operator or administrator can control jobs from the job management tools; users can print to the Hold queue and the Print queue, but not to the Direct connection; the operator controls all job flow, but jobs sent to the Print queue may not require operator intervention; no access to Fiery WebTools.

5. **(Strictest control) A designated administrator and a designated operator, no Fiery WebTool access, operator controls all jobs**

   Only an administrator can perform Setup, calibration, and other administrator functions, and only an operator or administrator can control jobs from the job management tools; users can print only to the Hold queue; the administrator and the operator have complete control of job flow; no access to Fiery WebTools.

Use these settings in Setup:	1 (Least)	2	3	4	5 (Strictest)
Enable Direct connection	√	√	√		
Enable Print queue	√	√	√	√	
Enable Web Services	√	√	√		
Set an Administrator Password (*strongly recommended*)		√	√	√	√
Set an Operator password			√	√	√

Fiery X40 system software

The Fiery X40 uses Windows NT Workstation system architecture to receive and process jobs and send job data to the copier. To log in to the Fiery X40, enter Administrator as the user name, and enter the password.

NOTE: Configuring and monitoring the Windows NT functions from the Fiery X40 require the Fiery Advanced Controller Interface option. For more information, contact your authorized service/support technician.

Running on the Windows NT Workstation is the following software unique to the Fiery X40:

• Server—The Server is an independent software process that is started automatically whenever Windows NT is booted. As the central element of Fiery X40 system software, the Server process controls the spooling, rasterizing, and printing of jobs, as well as job accounting (the Job Log), and job storage and retrieval.

When the Server is not running, jobs cannot be received by the Fiery X40, job processing cannot occur, job data cannot be transferred to the copier for printing, and the Command WorkStation cannot connect to the Fiery X40. In the event that you need to restart the Server process, right-click the FieryBar and choose Restart Fiery.

• Command WorkStation—The Command WorkStation is the interface tool for the Server. It provides a graphical means of viewing and controlling Server functions.

About Setup

Setup configures the Fiery X40 to communicate with other devices and manage print jobs. It is required the first time the Fiery X40 is powered on after new system software is loaded or after server software is reinstalled. An initial Setup using default settings is adequate for getting the Fiery X40 to reach Idle status, but not for full functionality. When your network or user printing environment changes, you can change Setup options accordingly.

Initial Setup must be performed at the Fiery X40 Control Panel. Configure at least Server Setup, Network Setup, and Printer Setup, in that order. Afterwards, you can complete or change most Setup options from a Windows computer using the Command WorkStation or Fiery WebSetup.

Local Setup from the Fiery X40

Subsequent Setup can also be performed locally at the Fiery X40 using Server Setup, a Windows NT Control Panel. Some of the settings you specify in Server Setup configure the Server process (such as print job defaults) while some configure the Windows NT Workstation environment (such as system date and time). Depending on the settings you change in Server Setup, Windows NT must be restarted before your changes take effect.

Setup options for local Setup are divided into three groups:

General Setup   System settings, passwords, and Job Log options

Network Setup   All the active network systems that will transmit print jobs to the Fiery X40

Printer Setup   Fiery X40 print connections to be made available to users, and color defaults for jobs

The other Setup applications (the Command WorkStation or Fiery WebSetup) have different interfaces, but allow you to set most of the same options.

Network server setup requirements

For Token Ring, Novell, and Windows NT (using TCP/IP) networks, the network servers must be configured for printing to the Fiery X40 *before* you configure Fiery X40 network settings in Setup. The diagrams in Chapter 1 give chapter references for network server setup.

To configure network settings in Setup, you need a live network connection so the Fiery X40 can query the network for zones, servers, and server-based queues.

Whenever the configuration of the Fiery X40, the copier, or the network itself changes at your site, you can alter individual settings to correspond to the changed environment. Changing network or port settings may require that you make changes to other Setup options as well.

Ensuring the copier connection

Complete the following steps before you configure the Fiery X40 and the workstations that will print to the Fiery X40. A service technician will have performed some initial installation.

TO PREPARE FOR FIERY X40 CONFIGURATION:

1. **Print a copier test page to make sure the copier is functioning normally.**

2. **Turn off the copier and connect the interface cable from the copier to the Fiery X40.**

3. **To confirm this connection, turn on the copier and the Fiery X40 and print a Test Page from the Fiery X40 Control Panel.**

   To print a Test Page, press the Menu button on the Control Panel to display the Functions menu. Choose Print Pages, and then Test Page.

4. **With both the copier and the Fiery X40 turned off, connect the network cable to the Fiery X40, as described in Chapter 1.**

   The network should already be installed and operational.

5. **Turn on the copier and then the Fiery X40.**

6. **Prepare network servers to share Fiery X40 user software and to enable networked users to print to the Fiery X40.**

   See Chapter 5 for details.

7. **Perform Fiery X40 Setup as described in Chapter 3.**

**Chapter 3:
Performing
Setup from
the Control Panel**

Setup is required the first time the Fiery X40 is turned on after new system software is loaded. In this initial Setup, you (or the service technician who loads the software) choose the language to use for Fiery X40 Control Panel menus and messages.

About Fiery X40 Setup

In initial Setup, you must configure at least Server Setup, Network Setup, and Printer Setup, in that order, from the Control Panel. If you don't configure the remaining Setups, the Fiery X40 uses default settings. These defaults allow the Fiery X40 to reach the Idle state, but might not allow users to print to the Fiery X40. You need to make settings appropriate for the printing environment at your site.

Making changes to Setup

After initial Setup, you can change Setup options from the Control Panel (page 3-2), Fiery X40 Server Setup (a Windows NT application), Fiery WebSetup, or the Command WorkStation (page 4-3). Most Setup options can be set from any of these methods.

NOTE: Configuring and monitoring the Windows NT functions on the Fiery X40 require the Fiery Advanced Controller Interface option. For more information, contact your authorized service/support technician.

Network server setup requirements

For Novell and Windows NT 4.0 (using TCP/IP) networks, the network servers must be configured for printing to the Fiery X40 *before* you configure Fiery X40 network settings in Setup. You need a live network connection so the Fiery X40 can query the network for zones, servers, and server-based queues. The diagrams on pages 1-5 through 1-9 give chapter references for network server setup.

You must configure the Fiery X40 with the correct Windows NT domain name. This is especially important for Windows printing, also known as SMB printing. For Fiery X40 systems that include the Fiery Advanced Controller option, open the Start Menu > Settings > Control Panel > Network > Identification tab, and enter the correct domain name. You must also check "Create a Computer Account in the Domain", and enter the user name and password of a user that can add workstations to the

specified domain. For configurations that do not include the Fiery Advanced Controller option, you need to add the Fiery X40 to the domain from a Windows NT 4.0 server on the network using the Server Manager utility.

Whenever the configuration of the Fiery X40, the copier, or the network itself changes at your site, you can alter individual settings to correspond to the changed environment. Likewise, if printing needs or administrative requirements change, you can alter the corresponding settings. Changing network or port settings may require that you make changes to other Setup options as well.

Fiery X40 Setup from the Control Panel

Setup performed from the Control Panel configures the Fiery X40 to communicate with other devices and manage print jobs sent to it.

Setup provides these groups of options:

- Server Setup to specify system options

- Network Setup to specify all the active network systems that transmit print jobs to the Fiery X40

- Printer Setup to specify how print jobs and queues are managed

- PS Setup to specify PostScript settings

- Color Setup to specify color settings

- Job Log Setup to specify how the Fiery X40 handles its log of printed jobs

The Change Password option in the Setup menu allows you to create and change an administrator password on the Fiery X40.

Accessing Setup options

The Control Panel on the front of the Fiery X40 enables you to set options and view information about jobs printed to the Fiery X40. It comprises the following parts:

• Activity light—indicates normal or problem activity

• Line selection buttons—select a setting and proceed to the next option

• Display window—shows status information and options for setting up the Fiery X40

• Up and down buttons—scroll menus, options, and settings

• Menu button—cancels without saving changes; also toggles to Functions menu

Fiery X40 Control Panel

Up button
Menu button
Down button

Activity light
Line selection buttons
Display window
The *Job Management Guide* describes the online display screens in detail. This chapter describes only the screens you might see when performing Setup.

1. **Make sure the information screen on the Control Panel reads Idle.**

   If Printing or RIPping appears, the Fiery X40 is processing, and you must wait until the system finishes and reaches the Idle state.

2. **Press the Menu button on the Control Panel to go to the Functions menu.**

3. **Scroll with the down arrow and press the line selection button next to Run Setup.**

   If an Administrator password has been set on the Fiery X40, you are prompted to enter it before you can perform Setup (see page 3-43).

4. **When prompted to confirm your choice, press the line selection button next to OK.**
5. **Press the line selection button to choose a Setup menu or command.**

   Press the down button to view the remaining screens of the main Setup menu.

6. **Perform, in order, Server Setup, Network Setup, and Printer Setup.**

   This is the minimum required for initial Setup. Later, you can complete the remaining Setups either from the Control Panel or from a Windows computer.

7. **Set an Administrator password to protect your Setup from unauthorized alteration.**

   Review the settings described in this chapter. For more information on Control Panel menus other than those in Setup, see the *Job Management Guide*.

```
△ Exit Setup        ▶

About the Control Panel Setup interface

When you perform Setup from the Control Panel, you select one menu after another and enter information about your Fiery X40 and your network and printing environment.

In each Setup screen, the last line of the display window shows the name of the current Setup menu. Most of the menus you see are shown on the Control Panel Map, a flowchart that can be printed from the Control Panel.

1. **At the Control Panel, press the Menu button to access the Functions menu.**

2. **Press the button for Print Pages.**

   The Control Panel displays the first four types of pages you can print. To see the remaining types of pages, press the down button.

3. **Press the button for Control Panel Map.**

Types of Setup screens

There are two types of Setup options:

|	
Multiple choice questions	You are given choices (for example, Yes or No, or a list of options from which to choose). Only one choice is displayed at a time, in highlighted text. The currently selected (or the default) value appears first.
	Use the up and down buttons to scroll through the choices, and choose OK when the correct information is displayed.
Information entry options	You must specify the information for your site. For example, the printer name or IP address.
	In that case, use the up and down buttons to scroll the alphanumeric symbols to make your selection.
	The cursor position is highlighted, and two of the line selection buttons become left and right arrow buttons. Arrows appear on the display window next to the corresponding buttons. Use these buttons to move between positions for entering information.
	NOTE: When you enter text, enter it from left to right, as the left arrow button acts as a delete key as well as a cursor-moving key. This is indicated in the display by the delete symbol (⌫).

The following section provides three specific examples of these types of options.

Example: Multiple choice

```
┌──────────────────────┐
│ Publish Print Queue  │
│ Yes                  │
│                      │
│                  OK  │
│ Printer Setup        │
└──────────────────────┘
```
```
┌──────────────────────┐
│ Publish Print Queue  │
│ No                   │
│                      │
│                  OK ◄│
│ Printer Setup        │
└──────────────────────┘
```

Press up or down to display the other option or options.

When the setting you want is displayed, press the button beside OK to continue.

Example: Information entry with fields

```
┌──────────────────────┐
│ Subnet Mask          │
│ 255.0.0.0         >  │
│                   <  │
│                  OK  │
│ TCP/IP (Ethernet)    │
└──────────────────────┘
```
```
┌──────────────────────┐
│ Subnet Mask          │
│ 255.0.0.0         >  │
│                   <  │
│                  OK  │
│ TCP/IP (Ethernet)    │
└──────────────────────┘
```
```
┌──────────────────────┐
│ Subnet Mask          │
│ 255.255.0.0       >  │
│                   <  │
│                  OK  │
│ TCP/IP (Ethernet)    │
└──────────────────────┘
```

From the starting position, press the right arrow button to move the cursor to the right.

The next field is selected. Press up or down to change the number.

When the correct number is displayed, press the right arrow button to move to the third field. Press the left arrow button to go back and edit, or press OK to select the choice and continue.

Example: Information entry with individual characters

```
┌──────────────────────┐
│ Enter Your File      │
│ Server Password   >  │
│                   ⌫  │
│                  OK  │
│ Bindery Setup        │
└──────────────────────┘
```
```
┌──────────────────────┐
│ Enter Your File      │
│ Server Password   >  │
│ 9                 ⌫  │
│                  OK  │
│ Bindery Setup        │
└──────────────────────┘
```
```
┌──────────────────────┐
│ Enter Your File      │
│ Server Password   >  │
│ 9                 ⌫  │
│                  OK  │
│ Bindery Setup        │
└──────────────────────┘
```
From the starting position, press up or down to enter the first character.

When the correct character is displayed, press the right arrow button to move the cursor to the next position.
Press up or down to enter a character in the second position.
The delete button erases the current character and moves the cursor to the left.
Pressing OK enters what is currently displayed.

NOTE: If you make a mistake during Setup, you can always use the Menu button to cancel without saving changes. Pressing the Menu button cancels what you are doing in the current screen to bring you to the next higher-level menu. You may need to press Menu more than once to return to the top level for the particular Setup in which you are working. Once at the top level, you can enter a Setup menu again, or exit without making changes.

When you have entered the settings, you need to save the changes. You are usually prompted to do so. If you choose Yes, your settings overwrite previous settings. If you choose No, your previous settings are retained. If necessary, the Fiery X40 reboots after you exit from the Setup menu.

Server Setup options

The Server Setup menu lets you specify system information that pertains to the Fiery X40 itself and all users. Accessing the menu is described on page 3-4.

```
▲ Exit Setup         ▶
  Server Setup       ▶  ◀— Press button for Server Setup
  Network Setup      ▶
▼ Printer Setup      ▶
  Setup
```

When you choose Server Setup, the options appear in sequence as described below. Default values, where applicable, appear in square brackets. Words shown in italics indicate that a product- or site-specific value is displayed.

Server Name
Default server name

Enter a name for the Fiery X40 (up to 15 characters long). This is the name that appears in the Chooser on an AppleTalk network.

NOTE: Do not use the device name (X40) as the server name. Also, if you have more than one Fiery X40, do not give them the same name. Windows NT is not designed to handle two computers with the same name in the same workgroup or domain.

System Date

Enter the correct system date in the standard form for your usage. The date is used on the Job Log.

System Time

Enter the correct system time. Enter the time based on the 24-hour clock in the form HH:MM (Hours:Minutes). The time is used on the cover page and on Job Logs.

Print Start Page
Yes/No [No]

Specify whether the Fiery X40 should print a start page every time it is restarted. The start page displays information about the Fiery X40, including the server name, current date and time, amount of memory installed in the Fiery X40, last calibration date, network protocols enabled, and connections published.

Use Character Set
Macintosh/DOS/Windows [Macintosh]

Specify whether the Control Panel and the Command WorkStation should use the Macintosh, DOS, or Windows character set for displaying filenames. This is important if filenames include accented or composite characters (such as é or æ).

For mixed-platform networks, choose the option that gives the best overall representation of the special characters you use.

Enable Printed Queue
Yes/No [Yes]

Specify whether to enable the Printed queue, which creates a storage location on the Fiery X40 disk for recent jobs that were printed from the Print queue. Users with Administrator or Operator access to the job management tools can reprint jobs from the Printed queue without sending them to the Fiery X40 again. If you select No, jobs are deleted from the Fiery X40 disk immediately after they are printed.

Jobs Saved in Printed Queue
1-99 [20]

This option appears only if Enable Printed Queue is set to Yes. Specify the number of jobs to be stored in the Printed queue. Jobs in the Printed queue take up space on the Fiery X40 hard disk. If disk space is low, use a smaller value for saved jobs.

Save Changes
Yes/No [Yes]

Select Yes to activate any changes made in the Server Setup; select No to return to the main Setup menu without making any changes.

Network Setup options

Network Setup configures the Fiery X40 to receive print jobs over the network systems that will be used at your site.

```
▲Exit Setup        ▶
 Server Setup      ▶
☐Network Setup     ▶ ◀
▼Printer Setup     ▶
 Setup
```

In the Setup menu, choose Network Setup, where you specify network addresses and names to be used by workstations, servers, and the Fiery X40 when they communicate with each other.

```
 Exit Network Setup ▶
 Port Setup         ▶ ◀
 Protocol Setup     ▶ ◀
 Service Setup      ▶ ◀
 Network Setup
```
The Network Setup menu includes three submenus that let you choose port types, protocols, and network services. You must perform Port Setup and enable at least one port.

For each item you enable, you are prompted to enter settings for that item. Default values, where applicable, appear in this manual with square brackets.

You need to display and select options only for the network systems that are currently used at your site. If your network requirements change, you can change Network Setup at any time.

If the Fiery X40 is configured to enable more than one protocol, it automatically switches to the correct protocol when it receives a print job. When the parallel port and one or two network ports are enabled, print jobs can be received over all of those ports at the same time.

The available network types, and the Setup areas that pertain to them, are summarized in the following table.

For this Network or Connection Type:	Use this Port Setup:	Use this Protocol Setup:	Use this Service Setup:
AppleTalk over Ethernet	Ethernet Setup	AppleTalk Setup	AppleTalk printing (PAP) is enabled automatically.
TCP/IP over Ethernet	Ethernet Setup	TCP/IP Setup: Ethernet Setup	LPD Setup Web Services Setup Windows Setup
IPX/SPX over Ethernet	Ethernet Setup	IPX/SPX Setup	PServer Setup (NDS, Bindery, or both)

For this Network or Connection Type:	Use this Port Setup:	Use this Protocol Setup:	Use this Service Setup:
Parallel	Parallel Port Setup	—	—

If the Token Ring option is installed, you have these additional options:

For this Network or Connection Type:	Use this Port Setup:	Use this Protocol Setup:	Use this Service Setup:
TCP/IP over Token Ring	Token Ring Setup	TCP/IP Setup: Token Ring Setup	LPD Setup Web Services Setup Windows Setup
IPX/SPX over Token Ring	Token Ring Setup	IPX/SPX Setup	PServer Setup (NDS, Bindery, or both)

To access Network Setup options:

1. **Confirm that the network cable is connected to the Fiery X40.**

   During Network Setup, the Fiery X40 queries the network for zones, servers, and server-based queues. If you perform Network Setup without a connected and functioning network, default settings are used that may not meet your needs.

2. **Choose Network Setup from the main Setup menu.**

3. **Choose Port Setup from the Network Setup menu.**

4. **To use Ethernet, choose Ethernet Setup from the Port Setup menu, and enter the appropriate settings.**

5. **If the Token Ring option is installed, choose Token Ring Setup and enter the appropriate settings.**

6. **To print to the parallel port, choose Parallel Port Setup from the Port Setup menu, and enter the appropriate settings.**

7. **When you have finished entering port settings, choose Exit Port Setup and then choose Protocol Setup.**

8. **Enter the appropriate settings for the protocol or protocols you will use.**

9. **When you have finished entering protocol settings, choose Exit Protocol Setup and then choose Service Setup.**

10. **Enter the appropriate settings for the services you will use.**

The options are described in detail in the following pages.

1. **When you have finished entering service settings, choose Exit Network Setup.**

2. **Choose Yes when prompted to save changes.**

3. **From the main Setup menu, choose another Setup or choose Exit Setup.**

Port Setup options

```
Exit Port Setup       ▶
Ethernet Setup        ▶ ◀
Token Ring Setup      ▶ ◀
Parallel Port Setup   ▶ ◀
Port Setup
```

You can enable Ethernet and parallel communication simultaneously. If the Token Ring option is installed, you can also enable Token Ring. To configure the Fiery X40, choose each port type you use and enter the settings for that port. Since network setups are nested, the names of higher-level menus are shown in this chapter to the left of each menu heading.
Network Setup   ▶
    Port Setup   ▶

Ethernet Setup

Enable Ethernet
Yes/No [Yes]

Select Yes if you have Ethernet cabling connected to the Fiery X40.

Ethernet Speed
Auto Detect/100 Mbps/10 Mbps [Auto Detect]

Select Auto Detect if your network environment is mixed, or if you do not know the network speed. If you know the speed of the network to which the Fiery X40 is attached (10 Mbps or 100 Mbps), select it.

Network Setup ▶
Port Setup ▶

Token Ring Setup

Enable Token Ring
Yes/No [No]

Select Yes if the Fiery X40 is to be connected to a Token Ring network.

Token Ring Speed
Auto Detect/16 Mbps/4 Mbps [Auto Detect]

Select Auto Detect if your network environment is mixed, or select the speed
(4 Mbps or 16 Mbps) of the network to which the Fiery X40 is attached.

Maximum Frame Size
(bytes)
4202/2154/1130/632 [4202]

Select the maximum frame size recommended by the network administrator at your
site. If you are uncertain of the setting to use, select the default value (4202).

Enable Source Routing
Yes/No [No]

Select Yes if your network supports source routing.

Source Routing
Request All Routes
Yes/No [Yes]

This option appears only if you enabled Source Routing. Select Yes if you want the
Request packet to travel to its destination by all routes.

Source Routing
Respond All Routes
Yes/No [Yes]

This option appears only if you answered No to the previous option. Select Yes if you
want the Response packet to return by all routes to the originating computer.

Parallel Port Setup options

You must enable the parallel port in order to enter the Parallel Port Setup options and print to the parallel port.

Network Setup ▶
Port Setup ▶

Parallel Port Setup

Enable Parallel Port
Yes/No [No]

Select Yes if you want to print through the parallel port. You can connect a single Windows computer to the parallel port and print directly to the Fiery X40.

NOTE: Enabling the parallel port does not conflict with using Ethernet or Token Ring communication with the Fiery X40.

Port Timeout in Seconds
5-60 [5]

This option appears only if Enable Parallel Port is set to Yes. Your setting determines how long (in seconds) the Fiery X40 waits without receiving data from the parallel port before deciding that the current job is complete. Until the timeout, the Fiery X40 cannot receive new jobs through the parallel port, but it can continue to receive network print jobs.

Ignore EOF Character
Yes/No [No]

This option appears only if Enable Parallel Port is set to Yes. This option specifies that the Fiery X40 should ignore end-of-file (EOF) messages in a file. This option must be set to Yes to print PostScript files in binary format (not ASCII); under normal circumstances, it should be set to No. When this option is set to Yes, the Fiery X40 uses the parallel port timeout value to determine when the end of the file has been reached. If you experience printing problems, set this option to No.
Protocol Setup options

```
Exit Protocol Setup ▶
AppleTalk Setup      ▶ ◀
TCP/IP Setup         ▶ ◀
IPX/SPX Setup        ▶ ◀
Protocol Setup
```

Network Setup ▶

    Protocol Setup ▶

To configure the Fiery X40, choose each protocol and enter the settings for that protocol. You can enable AppleTalk, TCP/IP, and IPX/SPX communication simultaneously.

AppleTalk Setup

Enable AppleTalk
Yes/No [Yes]

Select Yes if you have an AppleTalk network connected to the Fiery X40. This setting enables the Fiery X40 to communicate over AppleTalk networks.

AppleTalk Zone
List of zones

The Fiery X40 searches the network for AppleTalk zones in your network segment. Scroll through the list to select the AppleTalk zone in which you want the Fiery X40 to appear. If your segment has only one zone, the Fiery X40 is assigned to that zone automatically.

The message "No AppleTalk zone found" may mean your network has no zones, or the network cable is not connected (see page 6-4). Choose OK to dismiss the message.

TCP/IP Setup options

```
Exit Protocol Setup ▶
AppleTalk Setup      ▶
TCP/IP Setup         ▶ ◀
IPX/SPX Setup        ▶
Protocol Setup
```

```
Exit TCP/IP Setup    ▶
Ethernet Setup       ▶ ◀
Token Ring Setup     ▶
Parallel Port Setup  ▶
TCP/IP Setup
```

To configure the Fiery X40 for TCP/IP, choose TCP/IP Setup.
Choose Ethernet Setup and enter the appropriate settings. Choose each network type you use (Ethernet, Token Ring, or parallel port) and enter the appropriate settings. Token Ring Setup appears as an option only if you have enabled Token Ring in Port Setup.

NOTE: If TCP/IP is running on *both* an Ethernet and a Token Ring network, it is assumed that the two networks are already routed to each other. The Fiery X40 does not function as a router.

When you set an IP address, subnet mask, or gateway address for the Fiery X40 during Setup, you can allow the Fiery X40 to get these addresses automatically from a DHCP, BOOTP, or RARP server. First, turn on or reboot the Fiery X40 and allow it to reach Idle. Next, make sure the DHCP, BOOTP, or RARP server is running. Finally, perform Fiery X40 Setup.

TCP/IP Setup with Ethernet

Network Setup   ▶
    Protocol Setup   ▶
        TCP/IP Setup   ▶

Ethernet Setup

Enable TCP/IP for Ethernet
Yes/No [Yes]

Select Yes if you have a TCP/IP network connected to the Fiery X40 over Ethernet cabling.

If you use Token Ring, enabling TCP/IP for Token Ring is required for enabling the Fiery WebTools.

NOTE: If you are using TCP/IP for printing from Windows 95/98/2000 computers or Windows NT 4.0 workstations, enabling TCP/IP here also enables you to use Fiery utilities from Windows 95/98/2000 computers or Windows NT 4.0 workstations using TCP/IP protocols.

Enable Auto IP Configuration
Yes/No [Yes]

Select Yes to allow the Fiery X40 to obtain its Ethernet IP address by searching the network. Depending on your network and the protocol you select in the following option (DHCP, BOOTP, or RARP), the IP address can change. Select No to assign the Fiery X40 a static IP address that will not change. If you select No, you proceed to the IP Address option, where you manually set the IP address.

Select protocol
DHCP/BOOTP/RARP [DHCP]

This option appears only if you answered Yes to Enable Auto IP Configuration. Select the protocol over which the Fiery X40 should search for its IP address. Both DHCP and BOOTP allow the Fiery X40 to obtain the Ethernet IP address and Subnet Mask automatically. RARP obtains only the Ethernet IP address.

Depending on your network, the Fiery X40 might be assigned a different address after you reboot the Fiery X40. With the DHCP setting, the Fiery X40 can be assigned a different address even if it is not rebooted. Make sure the network is already configured properly for the protocol you select.

Get Gateway Address Automatically
Yes/No [Yes]

Use this option to get the gateway address automatically for printing with TCP/IP. This option appears only if you selected DHCP or BOOTP as the protocol in the previous option.

If you select a DHCP or BOOTP protocol and later change it to RARP, you must return to Setup and set this option to No. You can then set the address manually. This is because RARP does not support automatic assignment of the gateway address.

IP Address
[127.0.0.1]

Enter the Fiery X40 IP address for Ethernet. This IP address, unlike an IP address set automatically, remains the same if you reboot the Fiery X40. You must change the default to a valid address for your network. For information about setting up printing with TCP/IP, see Chapter 5.

Subnet Mask
[255.255.255.0]

This option lets you modify the subnet mask for printing with TCP/IP over Ethernet. To set the subnet mask, enter one of the following values:

• 255.0.0.0 if the IP address starts with a number less than 128

• 255.255.0.0 if the IP address starts with a number from 128 through 191

• 255.255.255.0 if the IP address starts with a number greater than 191

NOTE: Confirm the subnet mask setting with your network administrator before proceeding. In some cases the required setting may be different from those listed.

Gateway Address
[127.0.0.1]

This option appears only if you answered No to Get Gateway Address Automatically, or if you selected RARP as the protocol.

Use this option to set the gateway address for printing with TCP/IP. If your network uses a gateway, you must change the default to a correct gateway address for your network.

The gateway address applies to either a Token Ring or an Ethernet network. If TCP/IP is running on *both* an Ethernet and a Token Ring network, the gateway address you enter must be in the same subnet as either the Ethernet or the Token Ring address.

TCP/IP Setup with Token Ring

Enable TCP/IP for Token Ring, and enter the IP address and subnet mask. Then, if your TCP/IP network has a gateway, and users outside the gateway plan to print to the Fiery X40 using TCP/IP, enter the gateway address.

Network Setup ▶
    Protocol Setup ▶
        TCP/IP Setup ▶

Token Ring Setup

Enable TCP/IP for Token Ring
Yes/No [No]

Select Yes if you have a TCP/IP network connected to the Fiery X40 over Token Ring.

If you use Token Ring, enabling TCP/IP for Token Ring is required for enabling the Fiery WebTools.

NOTE: If you are using TCP/IP for printing from Windows 95/98/2000 computers or Windows NT 4.0 workstations, enabling TCP/IP here also lets you use the Fiery utilities from Windows 95/98/2000 computers or Windows NT 4.0 workstations using TCP/IP protocols.

3

Enable Auto IP Configuration
Yes/No [Yes]

Select Yes to allow the Fiery X40 to obtain its Token Ring IP address. Depending on your network and the protocol you select in the following option (DHCP, BOOTP, or RARP), the IP address can change. Select No to assign the Fiery X40 a static IP address that will not change. If you select No, you proceed to the IP Address option, where you manually set the IP address.

Select protocol
DHCP/BOOTP/RARP [DHCP]

This option appears only if you answered Yes to Enable Auto IP Configuration. Select the protocol over which the Fiery X40 should search for its IP address. Both DHCP and BOOTP allow the Fiery X40 to obtain the Token Ring IP address and Subnet Mask automatically. RARP obtains only the Token Ring IP address.

Depending on your network, the Fiery X40 might be assigned a different address after you reboot the Fiery X40. With the DHCP setting, the Fiery X40 can be assigned a different address even if it is not rebooted.

Make sure the network is already configured properly for the protocol you select.

Get Gateway Address Automatically
Yes/No [No]

Use this option to get the gateway address automatically for printing with TCP/IP. This option appears only if you selected DHCP or BOOTP as the protocol in the previous option.

If you select a DHCP or BOOTP protocol and later change it to RARP, you must return to Setup and set this option to No. You can then set the address manually. This is because RARP does not support automatic assignment of the gateway address.

IP Address
[127.0.0.1]

Enter the Fiery X40 IP address for Token Ring. This IP address, unlike an IP address set automatically, remains the same if you reboot the Fiery X40. You must change the default to a valid address for your network. For information about setting up printing with TCP/IP, see Chapter 5.

3

**Subnet Mask
[255.255.255.0]**

This option lets you modify the subnet mask for printing with TCP/IP over Token Ring. To set the subnet mask, enter one of the following values:

• 255.0.0.0 if the IP address starts with a number less than 128

• 255.255.0.0 if the IP address starts with a number from 128 through 191

• 255.255.255.0 if the IP address starts with a number greater than 191

NOTE: Confirm the subnet mask setting with your network administrator before proceeding. In some cases the required setting may be different from those listed.

**Gateway Address
[127.0.0.1]**

This option appears only if you answered No to Get Gateway Address Automatically, or if you selected RARP as the protocol.

Use this option to set the gateway address for printing with TCP/IP. If your network uses a gateway, you must change the default to a correct gateway address for your network.

The gateway address applies to either a Token Ring or an Ethernet network. If TCP/IP is running on *both* an Ethernet and a Token Ring network, the gateway address you enter must be in the same subnet as either the Ethernet or the Token Ring address.

IPX/SPX Setup options

```
Exit Protocol Setup  ▶
AppleTalk Setup      ▶
TCP/IP Setup         ▶
IPX/SPX Setup        ▶  ◀
Protocol Setup
```
To specify the frame types the Fiery X40 uses for IPX/SPX protocols, choose IPX/SPX Setup from the Protocol Setup menu. You must choose at least one frame type to enable IPX/SPX protocols. The Fiery X40 supports the following frame types for IPX/SPX:

• For Ethernet—Ethernet 802.2, Ethernet 802.3, Ethernet II, and Ethernet SNAP

• For Token Ring—Token Ring and Token Ring SNAP

3-20

Performing Setup from the Control Panel

For protocols other than IPX/SPX, the frame type is automatically enabled and does not require setup, as follows:

With this protocol:	And these printing services:	This frame type is automatically enabled:
AppleTalk	PAP (Printer Access Protocol)	Ethernet SNAP
TCP/IP with Ethernet	LPD (Line Printer Daemon)	Ethernet II
TCP/IP with Token Ring	LPD (Line Printer Daemon)	Token Ring SNAP

```
Exit IPX/SPX Setup  ▶
Select Frame Types  ▶  ◀
Clear Frame Types   ▶
IPX/SPX Setup
```
Select Frame Types

Enable IPX Auto Frame Type
Yes/No [Yes]

Specify whether the Fiery X40 should try to bind to all available frame types automatically. The Fiery X40 does so whether or not all frame types are appropriate. To determine the frame types that were successfully bound, save your changes, exit Setup, allow the Fiery X40 to reboot, and print a Configuration page. The Configuration page lists only one of the frame types that were successfully bound.

If you answer No to this option, you can select frame types manually. You must choose at least one frame type to enable IPX/SPX protocols.

```
▲ Exit IPX/SPX Setup ▶
  Ethernet 802.2   * ▶
  Ethernet 802.3     ▶
▼ Ethernet II        ▶
IPX/SPX Setup
```

The frame selection screen allows you to make multiple selections. Depending on your Port Setup selection, only Ethernet frame types, only Token Ring frame types, or all frame types are displayed.

Press the line selection button beside each frame type used on your IPX/SPX network. An asterisk (*) appears beside each selected frame type. Press the line selection button again to deselect a frame type. Use the up and down buttons to scroll to additional frame types. The Fiery X40 binds to each frame type as you select it.

When you have selected all the frame types used, choose Exit IPX/SPX Setup.

Clear Frame Types

You can clear all frame types at once by choosing Exit IPX/SPX Setup, then choosing IPX/SPX Setup and selecting Clear Frame Types.

Service Setup options

```
Exit Service Setup ▶
LPD Setup          ▶
PServer Setup      ▶
Windows Setup      ▶
   Service Setup
```

```
Web Services Setup ▶
Port 9100 Setup    ▶

   Service Setup
```
Network Service Setup has options for TCP/IP and IPX/SPX networks.

- LPD Setup enables lpd printing on TCP/IP networks.

- For IPX/SPX networks, PServer Setup allows you to enter the names of the Novell objects that are concerned with Fiery X40 print jobs.

- Windows Setup enables the Microsoft SMB (Server Message Block) protocol, which supports peer-to-peer printing, also known as Windows printing or SMB printing.

- Web Services Setup enables the http protocol and the use of the Fiery WebTools.

Port 9100 Setup allows users to download jobs to a print connection on the Fiery X40.

PServer is a program in the Fiery X40 that can service the Novell print queues assigned to the Novell print servers you have set up for printing to the Fiery X40. When you choose PServer Setup and enable PServer, you can set up NDS (Novell Directory Services), Bindery Services, or both. NDS is used with NetWare 4.x; Bindery Services are used with NetWare 3.x or with NetWare 4.x in bindery emulation mode.

LPD Setup options

Network Setup   ▶
    Service Setup   ▶
        LPD Setup   ▶

Enable LPD
Yes/No [Yes]

Select Yes to allow lpd printing. See "Setting up the Fiery X40 on TCP/IP networks" on page 5-15 for more information.

PServer Setup options

Network Setup ▶
    Service Setup ▶
        PServer Setup ▶

Enable PServer
Yes/No [No]

Select Yes if you have a Novell network connected to the Fiery X40.

```
Exit PServer Setup  ▶
NDS Setup           ▶  ◀
Bindery Setup       ▶  ◀
Polling Interval    ▶
PServer Setup
```

Choose NDS Setup if your network uses NetWare 4.x in native mode. Choose Bindery Setup if your network uses NetWare 3.x or uses NetWare 4.x in bindery emulation mode.

If your network uses *both* NDS and Bindery, set up NDS first. Setting up NDS after Bindery will overwrite Bindery Setup.

If your network uses both NDS and Bindery, and uses NetWare 4.x servers in bindery emulation, note that the Fiery X40 cannot service NDS and bindery emulation servers on the same NDS tree.

Network Setup ▶
    Service Setup ▶
        PServer Setup ▶

NDS Setup

Before entering NDS settings, be sure the Fiery X40 is connected to the network and you have already configured an NDS directory tree with a Printer, a Print Server, and one or more Print Queue objects for Fiery X40 jobs (see page 5-4). To perform NDS Setup you may need permission to browse the NDS tree. If access to the Print Server is restricted, you need a login password.

The main objective of NDS Setup is to specify the Print Server object. In addition, you can indicate the location of the Fiery X40 print queues.

The terms NetWare server, Novell server, and IPX server are in common use and are used here interchangeably to mean the server on an IPX network running Novell NetWare networking software.

Enable NDS
Yes/No [No]

Select Yes if the NetWare servers you will use to print to the Fiery X40 are running NetWare 4.x in native mode.

Select NDS Tree
List of trees

Use the up and down buttons to browse the list of NDS trees available to the
Fiery X40. Choose OK when you have displayed the tree that contains the Printer,
Print Server, and print queue objects you have previously defined for the Fiery X40.

Your new NDS tree selection automatically overwrites any previous tree selection. If
you change the NDS tree selection and there are also current Bindery settings, you are
alerted that they will be deleted. If you continue with NDS Setup, you can replace
Bindery settings afterwards. If you don't want to continue, you can exit NDS Setup by
pressing the Menu button to escape.

Is user login needed
to browse NDS tree?
Yes/No [No]

Select No if no password is required to browse the tree. You can proceed to navigate to
the Print Server object.

Select Yes if network permissions require that you log in to browse the NDS tree and
see the Print Server object you want to select. If you select Yes, you are prompted to
navigate to the User Login object.

Navigate the NDS
tree to the User
Login object.

This message is displayed if you selected Yes for the previous option. Choose OK and
browse the NDS tree as described in the following paragraphs.

NDS Tree name
Object list, ".."

Browsing to find the User Login object begins with the NDS tree that you selected
previously (with Select NDS Tree). Use the up and down buttons to scroll a list of
objects in the tree beneath the [Root] in the hierarchy, or use the navigation symbol
".." to go up one level at a time.

In each subsequent browse screen, the top line represents your current location. The
second line contains:

• A list of objects in the current container directly below your current location.

• The symbol ".." to go up one level.

With an object selected, choose OK to travel down the tree, or choose ".." to go up the tree. When you select an object and choose OK, that object is then displayed on the top line, and the second line lists objects directly below it.

Continue to browse the NDS tree until the User Login object is displayed in the second line. Choose OK.

Enter Password

Enter the login password for the NDS tree, using the up and down buttons to select characters, and the left and right arrow buttons to move the cursor. Choose OK.

**Navigate the NDS
tree to the Print
Server.**

Choose OK to browse the NDS tree to the Print Server object.

Browsing to find the Print Server object begins with the NDS tree that you selected previously (with Select NDS Tree). In each subsequent browse screen, the top line represents your current location. The second line contains:

• A list of objects in the current container directly below your current location.

• The symbol ".." to go up one level.

With a container object selected, choose OK to travel down the tree, or choose ".." to go up the tree. When you select an object and choose OK, that object is then displayed on the top line, and the second line lists objects directly below it.

When the Print Server is displayed in the second line, choose OK.

**Enter Print Server
Password**

Enter the Print Server password, using the up and down buttons to enter characters, and the left and right arrow buttons to move the cursor. Choose OK. (If no password is required, choose OK.)

3

**Server should look
for print queues in:
Entire NDS Tree/Specified subtree [Entire NDS Tree]**

By default, the Fiery X40 searches the entire NDS tree for Fiery X40 print connections. This option lets you restrict the search for Fiery X40 print jobs to a subtree (the Print Queue root) in which the Fiery X40 print connections have been defined. This makes the search more efficient. Select Entire NDS Tree if the tree is small. Select Specified Subtree to restrict the search and specify the subtree.

If you select Entire NDS Tree, choosing OK returns to PServer Setup. Proceed with Bindery Setup (see page 3-26), set the Polling Interval (see page 3-31), or choose Exit PServer Setup to return to the Service Setup menu.

**Browse to the root
of the Print Queue
subtree.**

This message is displayed if you selected Specified Subtree in the previous option. Choose OK to browse the NDS tree to the Print Queue subtree.

Browsing to find the container object begins with the NDS tree that you selected previously (with Select NDS Tree). In each subsequent browse screen, the top line represents your current container. The second line contains:

• A list of objects directly below your current location

• The symbol ".." to go up one level

• The symbol "." to select the current container object (displayed in the top line) without traveling down the tree

With an object selected, choose OK to travel down the tree, or choose ".." to go up the tree. When you select an object and choose OK, that object is then displayed on the top line, and the second line lists objects contained within.

When the container that contains print queues is displayed in the second line, choose OK. In the next screen, choose "." and choose OK to select the object in the top line.

When the Fiery X40 displays the container name, choose OK to return to PServer Setup.

Proceed with Bindery Setup (see page 3-26), set the Polling Interval (see page 3-31), or choose Exit PServer Setup to return to the Service Setup menu.

Bindery Setup options

Network Setup ▶
   Service Setup ▶
      PServer Setup ▶

Bindery Setup

Use Bindery Setup if you have already configured one or more bindery servers (file servers running NetWare 3.x or NetWare 4.x in bindery emulation) with a Print Server and a Print Queue for Fiery X40 jobs. Before entering bindery settings, be sure the Fiery X40 is connected to the network and the NetWare file server is running. If Guest Login is not supported, you need a valid user name and password.

NOTE: The terms NetWare server, Novell server, and IPX file server are in common use and are used here interchangeably to mean the server on an IPX network running Novell NetWare networking software.

Bindery Setup menu

```
▲Exit Bindery Setup ▶
 Add File Server    ▶
 View Server List   ▶
▼Edit Connection    ▶
  Bindery Setup
```

```
↕
```

```
▲Remove File Server ▶

  Bindery Setup
```

Because you can set up more than one Novell server to handle Fiery X40 print jobs, an additional menu is displayed for this purpose. The options are:
• Add File Server—creates a new file server connection to the Fiery X40. You can set up a maximum of eight file server connections. After you have finished adding a new server, you return to the Bindery Setup menu, and you can set up another server if you wish.

• View Server List—displays the list of file servers that have already been selected to communicate with the Fiery X40.

• Edit Connection—lets you change the NetWare Print Server that will print to the Fiery X40.

• Remove File Server—lets you disconnect the Fiery X40 from a file server to which it is currently connected. Remove a file server when you want to reduce the number of connections to the Fiery X40 or re-assign the connection to a different NetWare file server.

• Exit Bindery Setup—after you added all servers, viewed a list of file servers, or removed a file server from the list.

NOTE: If you change your mind about any of the menus you have selected, you can use the Menu button to escape and return to the main Bindery Setup menu. To cancel all changes you must exit Network Setup and select No to Save Changes.

3

Network Setup ▶
 Service Setup ▶
  PServer Setup ▶
   Bindery Setup ▶

Add File Server

This option gives you two ways to add a Novell NetWare file server.

Select File Server
From List/Search by Name [From List]

You may select the file server from a scrollable list, or by a name search.
Choose From List if your network doesn't have a large number of file servers.
Select Search by Name if the number of file servers is so large that scrolling through
the list would take a long time.

If you selected **From List**:	If you selected **Search by Name**:
Add Server *List of all servers* The Fiery X40 obtains a list of NetWare file servers by querying the IPX network. Use the up and down buttons to select a NetWare file server from the list. Choose the server on which you have configured a print server and print queue to handle Fiery X40 print jobs.	**Enter First Letters of Server Name** Use the up and down buttons to enter the first letters of the name of the file server you want to use, and choose OK. **Add Server** *List of servers matching the search* This option is displayed if you entered letters to search. Scroll to select the server you want from the list.

Once you have chosen a file server, the Fiery X40 immediately tries to log in as a guest
without a password. If it succeeds, it skips to the NetWare Print Server option.

If you try to add a file server but all Fiery X40 connections are already being used, you
are prompted to remove a file server (see "Remove File Server" on page 3-30).

File Server Login
administrator/supervisor/Enter Login Name [supervisor]

This option appears only if a password is required for login or if there is no guest
account or the guest account is restricted. Choose Enter Login Name to enter your
own login name and password or to log in as a guest. Choose administrator or
supervisor if you have those privileges.

3

**Enter Your Login Name
[guest]**

This option and the next appear only if you selected Enter Login Name for the File Server Login. Enter your login name or select guest.

Enter Your File Server Password

Enter the password for logging in to your NetWare file server.

NetWare Print Server
Print Server Name

Select the name of the print server that you have configured in the NetWare utility PCONSOLE. This is the print server that will route print jobs to the Fiery X40 from computers on IPX networks.

Enter Your Print Server Password

This option appears only if your NetWare print server is set up to require you to log in with a password. Enter your print server password.

Choose Add Server again until you have connected each NetWare file server you have configured for printing to the Fiery X40. When you have added all the IPX file servers for your site, choose Exit Bindery Setup.

Network Setup ▶
    Service Setup ▶
        PServer Setup ▶
            Bindery Setup ▶

View Server List

Supported servers

This option lets you view the list of file servers currently connected to the Fiery X40, that is, servers you have added in Bindery Setup. You are notified if there are none. When you choose OK, you return to the Bindery Setup menu.

Network Setup ▶
    Service Setup ▶
        PServer Setup ▶
            Bindery Setup ▶

Edit Connection

On each connected NetWare file server, you have defined a print server to handle Fiery X40 print jobs. Use this option to change the print server assigned to the Fiery X40.

Choose File Server
File server name

From the list of connected NetWare file servers, choose the file server whose print server you wish to change.

NetWare Print Server
List of print servers on selected file server

Choose the name of the print server that you now wish to use. This is the print server that will route print jobs to the Fiery X40 from computers on IPX networks.

If you change your mind, press the Menu button to return to the Bindery Setup menu without making a change.

Enter Your Print Server Password

This option appears only if your NetWare print server is set up to require you to log in with a password. Enter your print server password.

The Bindery Setup menu is displayed again. You can edit other connections, choose another Bindery Setup option, or choose Exit Bindery Setup.

Network Setup ▶
   Service Setup ▶
      PServer Setup ▶
         Bindery Setup ▶

Remove File Server

Remove support for
File server name

Allows you to select a NetWare file server from a list of connected file servers and remove the connection to it. You are notified that you have removed the connection, and the Bindery Setup menu is displayed again. If you change your mind and don't want to remove any of the file servers, press the Menu button.

You can choose another Bindery Setup option (such as adding another file server) or choose Exit Bindery Setup and proceed to set the polling interval.

Network Setup ▶
   Service Setup ▶
      PServer Setup ▶
         Bindery Setup ▶

Exit Bindery Setup

Choose Exit Bindery Setup after you have viewed a list of IPX file servers, removed a file server from the list or connected all the configured NetWare file servers. After you select Exit Bindery Setup, you return to the PServer Setup menu.

Polling Interval options

Network Setup ▶
    Service Setup ▶
        PServer Setup ▶

Polling Interval

Whether you are using NDS or Bindery services, choose Polling Interval from the main PServer Setup menu. If you do not reset the interval, the default value of 15 seconds is used.

NetWare Server Poll Interval in Seconds
1-3600 [15]

Specify the interval, in seconds, at which the Fiery X40 communicates with the Novell print server to see if there are print jobs waiting.

NOTE: If you select a short interval, the amount of network traffic increases. This may slow down other network jobs.

Windows Setup options

Network Setup ▶
    Service Setup ▶
        Windows Setup ▶

Enable Windows Printing
Yes/No [Yes]

Enabling Windows Printing enables SMB (Server Message Block), the file and printer sharing protocol built into Windows. Enabling SMB allows the Fiery X40 to be listed on the network so that Windows clients can print to a particular print connection (Hold, Print, or Direct) on the Fiery X40 without any other networking software. For information on how to set up a Windows computer for Windows printing, see *Getting Started.* Windows printing runs via TCP/IP, so TCP/IP must be configured on the Fiery X40 and on all workstations that use Windows printing.

Use Automatic Configuration
Yes/No [Yes]

This option appears if you chose DHCP or BOOTP as the protocol for automatically obtaining the IP address of the Fiery X40 (see page 3-18).

Choose Yes to have the Fiery X40 use a WINS name server and automatically obtain its IP address. After making your choice, you proceed to the Server Name option.

Choose No to proceed to the Use WINS Name Server option, where you specify whether to use a WINS name server, and then to the WINS IP Address option, where you specify its IP address.

Use WINS Name Server
Yes/No [No]

Broadcasts from SMB devices cannot pass across a router without a WINS name server. Setting up the WINS name server is outside the scope of this manual. To find out if a name server is available, contact your network administrator.

WINS IP Address
[127.0.0.1]

This option appears only if you choose Yes for WINS Name Server. Change the default address to the correct IP address for the WINS Name Server. Obtain the correct address from your network administrator.

Server Name
Default Name

The server name is the name that will appear on the network for accessing the Fiery X40 via SMB. The default name is the same as the server name assigned in Server Setup (see page 3-7).

Server Comments

Server comments (optional) can contain information about the printer. These comments are listed in the Properties of the Fiery X40 in Network Neighborhood. Comments can be up to 15 characters long.

Set Domain Name
Select from list/Enter manually [Select from list]

This option provides two ways to specify the workgroup or domain where you want the Fiery X40 to appear.

If you selected **Select from list**:	If you selected **Enter manually**:
Choose Domain	**Workgroup or Domain**
List of domains	
Select the workgroup or domain from the list.	Enter the name of the workgroup or domain. For more information about entering text and characters, see "Types of Setup screens" on page 3-5.

Web Services Setup

Network Setup ▶
  Service Setup ▶
    Web Services Setup ▶

Enable Web Services
Yes/No [Yes]

Select Yes to make the Fiery WebTools available to users (see page 5-12). TCP/IP must be enabled on the Fiery X40 and on user workstations. The Fiery WebTools include WebSpooler, Status, WebLink, WebDownloader, WebSetup, and Installer.

A Java-enabled Web browser and a valid IP address are required for each user. See *Getting Started* for details on browser choice and workstation requirements.

IPP Setup

Network Setup ▶
  Service Setup ▶
    IPP Setup ▶

Enable IPP
Yes/No [Yes]

Select Yes to enable printing with the Internet Printing Protocol (IPP). You must enable Web Services. For information on setting up user computers to use IPP printing, see *Getting Started*.

Port 9100 Setup

Network Setup ▶
  Service Setup ▶
    Port 9100 Setup ▶

Enable Port 9100
Yes/No [Yes]

This option allows application programs to open a TCP/IP socket to the Fiery X40 at Port 9100 to download a print job.

Port 9100 Queue
Direct/Print Queue/Hold Queue [Print]

Specify the Fiery X40 print connection for downloading jobs to Port 9100. Only the print connections you have enabled in Printer Setup are available.

Exit Service Setup

This returns you to the main Network Setup menu. Choose Exit Network Setup.

Save Changes
Yes/No [Yes]

Select Yes to activate any changes made in Network Setup; select No to return to the main Setup menu without making any changes.

Printer Setup options

Printer Setup configures the connections and printing behavior associated with a particular printing device. For more information on Fiery X40 print connections, see page 2-1.

```
▲ Exit Setup        ▶
  Server Setup       ▶
□ Network Setup      ▶
▼ Printer Setup      ▶  ◀
  Setup
```
1. In the main Setup menu, choose Printer Setup.

2. Enter the options appropriate to the printing requirements at the site.

3. When you have finished, save changes.

In the list of options that follows, default values, where applicable, appear in brackets.

NOTE: For users to use the Fiery utilities and Fiery WebTools or to print to the Fiery X40 over a TCP/IP network, you must publish at least the Hold queue or the Print queue.

Publish Direct Connection
Yes/No [Yes]

This option enables users to print (or download) jobs to the Fiery X40 without spooling. Jobs printed to the Direct connection are not saved in the Printed queue.

If you plan to download fonts to the Fiery X40, you must publish the Direct connection.

Publish Print Queue
Yes/No [Yes]

This option enables users to print (or download) jobs to the Print queue. Jobs that are printed to the Print queue are spooled to the Fiery X40 disk and printed on a first-in, first-out basis. Only queues published in the Printer Setup are available to users.

Publish Hold Queue
Yes/No [Yes]

Use this option to enable users to print (or download) jobs to the Hold queue. Jobs in the Hold queue can only be printed by copying or moving the jobs to the Print queue with the job management tools.

Parallel Connection
Print Queue/Hold Queue/Direct Connection [Print Queue]

Use this option to determine where jobs printed to the parallel port are sent. Only the print connections that you published are displayed.

This option appears only if you selected Yes for the Enable Parallel Port option in Network Setup. If only one of the print connections is published, this option does not appear and parallel port jobs are automatically printed to that connection.
Save Changes
Yes/No [Yes]

Select Yes to activate any changes made in the Printer Setup; select No to return to the main Setup menu without making any changes.

PostScript Setup options

PS (PostScript) Setup allows you to set defaults for the Fiery X40. Users can override most of these defaults on a job-by-job basis. However, users printing from UNIX or DOS command lines cannot override defaults from their applications. Therefore, you must set defaults in PostScript Setup. For information about these defaults, see the *Printing Guide*.

TO ACCESS POSTSCRIPT SETUP OPTIONS:

```
PS Setup          ▶  ◄
Color Setup       ▶
Job Log Setup     ▶
Change Password   ▶
Setup
```
1. **In the main Setup menu, choose PS Setup.**

2. **Enter the options appropriate to the printing requirements at the site.**

3. **When you have finished, save changes.**

   In the list of options that follows, default values, where applicable, appear in square brackets.

Default Paper Sizes
US/Metric [US]

Specify whether to print on US paper sizes (for example, letter, legal, tabloid), or Metric paper sizes (for example, A4, A3) by default. When no page size is defined within a PostScript file, jobs are printed on Letter paper if you selected US, or A4 paper if you selected Metric.

Convert Paper Sizes
No   Letter/11x17->A4/A3   A4/A3->Letter/11x17 [No]

Specify whether to convert paper sizes in documents automatically to the default paper sizes specified. For example, if you select Letter/11x17->A4/A3, a letter size document is automatically printed on A4 paper. If you select No, the Fiery X40 prints the document only if it finds a media source in the size specified by the file.

NOTE: This option works in conjunction with the Default Paper Sizes option. For example, if Convert Paper Sizes is set to Letter/11x17 -> A4/A3, and Default Paper Sizes is set to US, then jobs are printed A4/A3 size. This also includes Fiery X40 system pages such as the Start Page, Test Page, and Job Log.

Page Order
Forward/Reverse [Forward]

Specify the page order for printed output. Forward prints pages in the order received, so the last page is on the top of the stack and the first page is on the bottom. Reverse prints jobs in reverse order, so that the first page is on the top of the stack and the last page is on the bottom.

Color Mode
CMYK/Grayscale [CMYK]

Specify whether to print color (CMYK) or Grayscale images to the Fiery X40 by default. CMYK gives you full color prints. Select CMYK as the Color Mode before performing calibration on the Fiery X40. Grayscale converts all colors into shades of gray.

Print to PS Error
Yes/No [No]

Specify whether the Fiery X40 should print the available portion of a print job when it encounters a PostScript error. Select Yes to print the portion of the job that was processed before the error occurred; select No to cancel the print job entirely when a PostScript error is encountered. Leave this option at No unless you encounter printing problems.

Allow Courier Substitution
Yes/No [Yes]

Specify whether to substitute Courier for fonts that are unavailable when you download files to the Fiery X40, or when you print a document for which you do not have the corresponding printer font. If this option is set to No, jobs with fonts that are

not available on the Fiery X40 hard drive generate a PostScript error and do not print. This setting does not apply to PDF files; font substitution occurs automatically for PDF files.

Print Cover Page
Yes/No [No]

Specify whether the Fiery X40 prints a cover (job summary) page at the end of each print job. If you select Yes, each print job is followed by a page containing the name of the user who sent the job, the document name, the server name, the time the job was printed, the number of pages printed, and the status of the job. If a PostScript error occurs and the Print to PS Error option is set to Yes, the Cover Page lists the PostScript error message instead of the job status.

Face-Down Printing
On/Off [On]

Specify whether the copier should print the pages face-down.

Enable Bypass Tray as default
Yes/No [No]

Select Yes to specify that jobs should be printed from the bypass tray. Use this option to enable printing from the bypass tray when tray selection is not otherwise available in the interface, such as when printing from the command line (lpd or DOS). In general, select No when the interface permits tray selection on a job-by-job basis.

Detect Black as default
Yes/No [Yes]

Select Yes to specify that jobs should be scanned before being printed to detect black-only pages. Black detection allows for accurate billing of black-and-white pages and increases the printing speed of jobs containing multiple black-only pages.

Save Changes
Yes/No [Yes]

Select Yes to activate any changes made in PS Setup; select No to return to the main Setup menu without making any changes.

Color Setup options

Color Setup allows you to set defaults the Fiery X40 uses to control color output. Mac OS and Windows users who use the printer drivers provided on the User Software CD can override most of these defaults on a job-by-job basis. However, users printing from UNIX or DOS command lines cannot override defaults from their applications. Therefore, you must set defaults in Color Setup. For information about these defaults, see the *Printing Guide* and the *Color Guide*.

NOTE: Besides the defaults described in this section, Mac OS and Windows users have additional settings available from the printer drivers.

TO ACCESS COLOR SETUP OPTIONS:

```
△ PS Setup          ▶
  Color Setup       ▶  ◀
  Job Log Setup     ▶
▽ Change Password   ▶
  Setup
```
1. **In the main Setup menu, choose Color Setup.**

2. **Enter the options appropriate to the printing requirements at the site.**

3. **When you have finished, save changes.**

In the list of options that follows, default values, where applicable, appear in square brackets.

RGB Source Profile
EFIRGB/sRGB (PC)/Apple Standard/None [EFIRGB]

The RGB source is the color space used to control color for conversion from screen to printed output. EFIRGB is based on the reference points used in the creation of the Fiery X40 software. sRGB is based on an average of a large number of PC monitors. Apple Standard is the standard reference point for Apple's ColorSync software.

Rendering Style
Photographic/Presentation/Abs. Colorimetric/Rel. Colorimetric [Presentation]

The CRD (color rendering dictionary) defines how colors are converted from the RGB color space to device CMYK. Photographic, designed for images, retains the relative balance between colors to maintain the overall appearance of the image. Presentation, designed for bright colors, produces the saturated prints needed for most business presentations, but handles photographic images the same way as the Photographic CRD. Absolute Colorimetric provides the closest match to the CMYK device being simulated, including rendering the paper color as the background. Relative Colorimetric provides a close match to the CMYK device being simulated, regardless of the media used.

CMYK Simulation Profile
SWOP-Coated (EFI) / DIC (EFI)/ Euroscale (EFI)/None [SWOP-Coated (EFI)]

CMYK simulation allows color correction to simulate printed output on a commercial press, so that the Fiery X40 output can be used for proofing. The SWOP-Coated standard is used in the United States, DIC in Japan, and Euroscale in Europe. Custom simulations are user defined and named. The simulations provided with the Fiery X40 have the designation "EFI" after their names.

If any custom simulations have been created and loaded on the Fiery X40 with ColorWise Pro Tools, they also appear in the list of simulations. A custom simulation can be selected as the default simulation. See the *Color Guide* for more information about custom simulations.

CMYK Simulation Method
Quick/Full [Quick]

Quick simulation assumes that the copier toners match the printer's inks, and all changes affect only one color (C, M, Y, or K) at a time. Full simulation allows for more flexibility in matching toner to ink and all changes interact to maintain a better color balance.

RGB Separation
Output/Simulation [Output]

This option defines how the Fiery X40 processes RGB jobs. Select Output for RGB jobs that you print to the final output device. Select Simulation to simulate an output device that is not the device to which you are printing.

Output Profile
Default profile

Specify the default output profile to use for printing. Additional profiles can be created and downloaded to the Fiery X40 with ColorWise Pro Tools.

Pure Black Text/Graphics
On/Off [On]

The Pure Black Text/Graphics option optimizes black text and line art. The option also minimizes toner use for documents consisting of both color and black-only pages.

With this option On, black text and line art are printed with black toner only. With the option Off, black text and line art are printed using all four colors of toner. See the *Color Guide* for more information.

3

Black Overprint
On/Off [On]

With this option On, black text overprints on colored backgrounds. With this option Off, black text knocks out color backgrounds. Generally this option should be On. See the *Color Guide* for more information.

Spot Color Matching
On/Off [On]

With this option On, the Fiery X40 uses an internal lookup table to print the best equivalents of PANTONE colors. With this option Off, PANTONE colors are printed using the CMYK values defined in the originating applications. See the *Color Guide* for more information.

Save Changes
Yes/No [Yes]

Select Yes to activate any changes made in Color Setup; select No to return to the main Setup menu without making any changes.

Administrative functions in the Setup menu

The remaining choices in the Setup menu are intended to help you manage print jobs and color output but are not required for printing.

- **Job Log Setup** allows you to specify whether the Fiery X40 prints and clears its log of printed jobs automatically.

- **Change Password** enables you to create or change an Administrator password on the Fiery X40 so that casual users cannot enter the Setup menus and change Fiery X40 settings without permission. The Administrator password also controls many functions available from the job management tools.

TO SET JOB LOG OPTIONS:

```
△ PS Setup          ▶
  Color Setup       ▶
  Job Log Setup     ▶  ◀
▽ Change Password   ▶
  Setup
```

1. **Scroll the main Setup menu and choose Job Log Setup.**

2. **Enter the options as described in the following section.**

3. **When you have finished, save changes.**

Job Log Setup

The Job Log is a record of all jobs processed or printed on the Fiery X40, whether they originate from a user workstation, a networked server, or the Fiery X40 itself. The Job Log can be printed from the Control Panel or from the job management tools.

The printed Job Log lists accounting information about each job including user name, document name, time and date printed, and number of pages. Windows 95/98/2000 and Mac OS users can enter job-specific notes that appear in the Job Log. See the *Printing Guide* for details.

By default, the Job Log is not printed or cleared automatically. You can change these defaults in Job Log Setup. You can also print and clear the Job Log from the job management tools.

Default values for the following options, where applicable, appear in square brackets.

Auto Print Job Log Every 55 Jobs
Yes/No [No]

Use this option to specify whether the Fiery X40 prints the Job Log after every 55 jobs. Setting the Job Log for automatic printing is useful if accounting for each printed page is important at your site.

Auto Clear Job Log Every 55 Jobs
Yes/No [No]

Use this option to specify whether to clear the Job Log after every 55 jobs. If you do not enable this option, and do not clear the Job Log from the Fiery X40 or from a remote workstation, the Fiery X40 saves a record of all jobs.

In addition to Auto Clearing or manual clearing from a remote workstation, the Job Log (together with all queued jobs) is also cleared when you choose Clear Server from the Functions menu, when system software is reinstalled, or when a new version of system software is installed on the Fiery X40.

NOTE: If Auto Print Job Log Every 55 Jobs is set to No, setting this option to Yes has no effect.

Job Log Page Size
Tabloid/A3   Letter/A4 [Tabloid/A3]

Select the paper size for printing the Job Log. Regardless of page size, 55 jobs are listed on a page. The paper size used depends on the Default Paper Sizes setting in PS Setup. If the Default Paper Sizes setting is US, the Job Log is printed on tabloid or letter size paper, with tabloid the default.

Save Changes
Yes/No [Yes]

Select Yes to activate any changes made in Job Log Setup; select No to return to the main Setup menu without making any changes.

Change Password

Change Password enables you to set or change the Administrator password for the Fiery X40. Anyone with the Administrator password can modify the Setup options, and control the flow and order of print jobs with the job management tools.

When the Fiery X40 is installed, there is no password. If you do not create an Administrator password, users are not required to enter a password to modify the Setup or use the administrator functions in the job management tools. If an Administrator password has been set previously, you are required to enter it when you run Setup. Use the up and down buttons to select the characters and the left and right arrow buttons to move between them (see "Types of Setup screens" on page 3-5).

For more information on Administrator access privileges, see page 2-3.
For information on controlling print jobs with the job management tools, see the *Job Management Guide*.

NOTE: The Operator password can be set and changed from Fiery WebSetup or the Command WorkStation only.

TO CHANGE THE FIERY X40 PASSWORD:
1. **Scroll the main Setup menu and choose Change Password.**

2. **Enter and confirm the password as described below.**

```
△ PS Setup           ▶
  Color Setup        ▶
  Job Log Setup      ▶
▽ Change Password    ▶ ◀
  Setup
```

New Password

Use the up and down buttons to select the characters and the left and right arrow buttons to move between them. Enter characters from left to right, since the left arrow line selection button is a delete key. The password can be any combination of letters and numbers up to 19 characters. Choose OK when you are done. Be sure to keep track of the password.

NOTE: The only way to remove a password that you can't remember is to reinstall system software.

Verify New Password

Enter the new password again exactly as before to verify that you have entered it correctly. If you make a mistake, you are prompted to enter the password again. The new password is effective after you save changes and reboot the Fiery X40.

Exit Setup

```
△ Exit Setup      ▶ ◄
  Server Setup    ▶
  Network Setup   ▶
▽ Printer Setup   ▶
  Setup
```
Choose Exit Setup from the first screen of the main Setup menu when you have finished making Setup changes.

The Fiery X40 reboots and any changes you saved during the Setup take effect.

Clearing the Fiery X40

The Clear Server command enables you to clear all queued print jobs from the Fiery X40—jobs in the Fiery X40 Print, Hold, and Printed queues. Jobs can also be deleted, individually or as a group, from the job management tools. Clear Server also clears the Job Log, all jobs archived on the Fiery X40 hard disk, the index of archived jobs, and, finally, all FreeForm masters and the index of FreeForm masters. If you keep Job Logs, print or export the Job Log before you choose Clear Server.

To clear the Fiery X40, scroll the Functions menu and choose Clear Server. You are asked to confirm your selection. If the Administrator password has been set, you are prompted to enter it.

NOTE: To clear the Fiery X40 without using the Fiery X40 Administrator password, you must log in to Windows NT as Administrator, and use the Clear Server command from either the FieryBar menu or the Command WorkStation Server menu.

Restoring the Fiery X40 to factory defaults

When Fiery X40 system software is first installed, a backup copy is made automatically. This backup includes the Fiery X40 system software. If the Fiery Advanced Controller Interface option was originally installed, the backup also includes the Windows NT operating system. You can recover from this backup if necessary without having to reload the software from CDs.

All job data is cleared when you restore the backup. For information about the items that are cleared, see "Clearing the Fiery X40." You must perform Setup again because the Fiery X40 is restored with default settings.

To restore the Fiery X40:

1. **Make sure the Fiery X40 is at Idle.**

2. **Press the Menu button and choose Shut Down.**

3. **Choose Reboot System.**

4. **Immediately press the first line selection button and hold it until the diagnostics have finished.**

    See "Fiery X40 Control Panel" on page 3-3 for the location of the line selection button. During reboot, a progress bar indicates when the diagnostics have been completed.

5. **Choose Restore Backup.**

Printing a Configuration page from the Control Panel

The Configuration page lists all the settings in effect from the current Setup. After you have finished running Setup, print a Configuration page to confirm your settings. The Configuration page can also be printed from the Command WorkStation. See page 4-37 for details.

After you make changes to Setup and choose Exit Setup, the Fiery X40 reboots. This allows the Fiery X40 to recognize the new settings and display them properly on the Configuration page. Allow the Fiery X40 to reboot and return to Idle before printing a Configuration page. In particular, the reboot is necessary if you specified the DHCP, BOOTP, or RARP protocol to obtain an IP address automatically for the Fiery X40.

Post the current Configuration page near the server for quick reference. Users need the information on this page, such as the current printer default settings.

The other pages you can print from the Control Panel of the Fiery X40 or from the Command WorkStation include the Test Page, Font List, Job Log, Control Panel Map, and PANTONE, CMY, and RGB color charts. For information on these pages, see the *Job Management Guide*.

TO PRINT THE CONFIGURATION PAGE:

1. **At the Control Panel, press the Menu button to access the Functions menu.**

2. **Choose Print Pages.**

3. **Choose Configuration.**

Chapter 4:
Setting up the
Fiery X40 from
a Windows
Computer

After you have performed initial Setup (Server, Network and Printer Setup) from the Control Panel, you can change most Setup options from a Windows computer.

Accessing Setup

In addition to using the Control Panel, you can set up the Fiery X40 two ways: locally and remotely. Local Setup is for systems with the Fiery Advanced Controller Interface. Local Setup uses a Windows NT application, Fiery Server Setup. Remote Setup is is performed from a Windows computer using Fiery WebSetup or the Command WorkStation.

NOTE: In this chapter, illustrations for both Setup interfaces, where applicable, appear side by side: local Setup on the left, remote Setup on the right. Some Setup options cannot be accessed from remote Setup; use local Setup or the Fiery X40 Control Panel instead.

Regardless of how you access Setup, you must log in as Administrator, both at the Fiery X40 and within the Setup application you use. After the Fiery X40 is rebooted, log in at the Windows NT Logon window with Administrator as the login name and the password if required. This login and password are the Windows NT login and password.

To use the Setup applications (Fiery WebSetup or the Command WorkStation), you must enter the Fiery X40 Administrator password. This is set either from the Control Panel, Fiery WebSetup, or the Command WorkStation.

See *Getting Started* for information on the Command WorkStation and Fiery WebSetup system requirements and installation instructions.

NOTE: Fiery WebSetup is supported for Windows 95/98/2000 and NT 4.0 computers only.

Local Fiery Setup

You can access Fiery X40 Server Setup in these ways:

• Right-click the FieryBar on the Windows NT 4.0 desktop and choose Set Up Fiery.

• Right-click the Fiery icon in the Windows NT 4.0 taskbar and choose Set Up Fiery.

• Start the Command WorkStation and choose Setup from the Server menu.

The following window is displayed.
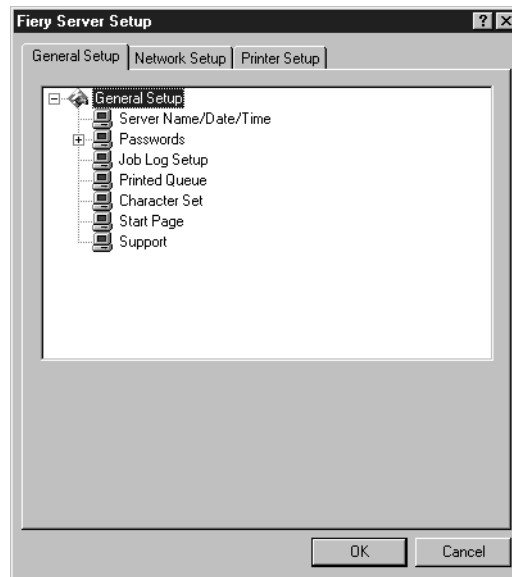

You see the available settings only when you select the particular option. For example, to view or change the setting for the Character Set option, select Character Set by clicking it once. The available settings are displayed at the bottom of the window.

After making your selections in a window, click the Apply button if it is present. When you have finished performing Setup, click OK to close the entire Setup window.

Remote Fiery Setup

You can access remote Setup from Fiery WebSetup or the Command WorkStation.

TO ACCESS FIERY WEBSETUP:

1. **Start your Internet browser application and enter the IP address of the Fiery X40.**

2. **Log in as Administrator.**

3. **When the Fiery X40 home page appears, click the WebSetup button.**

TO ACCESS SETUP FROM THE COMMAND WORKSTATION:

1. **Start the Command WorkStation application.**

2. **Log in as Administrator.**

3. **Choose Setup from the Server menu.**

   Regardless of how you access Setup remotely, the following window appears.
NOTE: The interface of remote Setup from the Command WorkStation and from Fiery WebSetup is identical. The remote Setup illustrations in this chapter are from the Command WorkStation.

General Setup options

You can specify Fiery X40 system settings that affect all users, such as the name of the Fiery X40, the system date and time, passwords, and Job Log printing.
Server Name—Specify a name for the Fiery X40. This is the name that appears in the Chooser on an AppleTalk network.

If you are using local Setup, click Modify, click Change, and enter the Server Name in the Computer Name field.

NOTE: Do not use the device name (X40) as the server name. Also, if you have more than one Fiery X40, do not give them the same name. Windows NT does not support two computers with the same name in the same workgroup or domain.

Date & Time—Specify the system date and time, which are used on the cover page and on Job Logs.

Enable Printed Queue—Specify whether to enable the Printed Queue, a storage location on the Fiery X40 disk for recently printed jobs. You can reprint jobs from the Printed queue without sending them to the Fiery X40 again. If the Printed queue is not enabled, jobs are deleted from the Fiery X40 disk immediately after they are printed.

Jobs Saved in Printed Queue—Specify the number of jobs to be stored in the Printed Queue. Jobs in the Printed queue take up space on the Fiery X40 hard disk.

Character Set—Specify whether the Control Panel and the job management tools should use the Macintosh, DOS, or Windows character set for displaying filenames. This is important if a filename includes accented or composite characters (such as é or æ). For mixed-platform networks, select the setting that gives the best overall representation of the special characters you use.

Start Page—Specify whether the Fiery X40 should print a start page when it is turned on or rebooted. The Start Page displays information about the Fiery X40, including server name, the current date and time, amount of memory installed, last calibration date, network protocols enabled, and print connections published.

Support—Enter names, phone numbers, and e-mail addresses of contact people at your organization who provide support for the Fiery X40 and the copier. In remote Setup, use the Support tab.

Passwords

You can set, change, and remove passwords for the Fiery X40. These passwords, specific to the Server process, are used for different functions from the Windows NT Administrator and Operator passwords. Keep careful track of the passwords you set for each.

Administrator—Controls access to Setup; Administrator privileges also include Operator privileges.

Operator—Controls access to job management functions via the job management tools.

NOTE: For more information on Fiery X40 passwords and the access privileges they allow, see page 2-3.

By default, *no* passwords are set. If you do not specifically set passwords, all users will have access to important functions such as Setup (including setting passwords) and job control. It is strongly recommended that you set at least an Administrator password to protect the Fiery X40 from unauthorized changes to Setup.
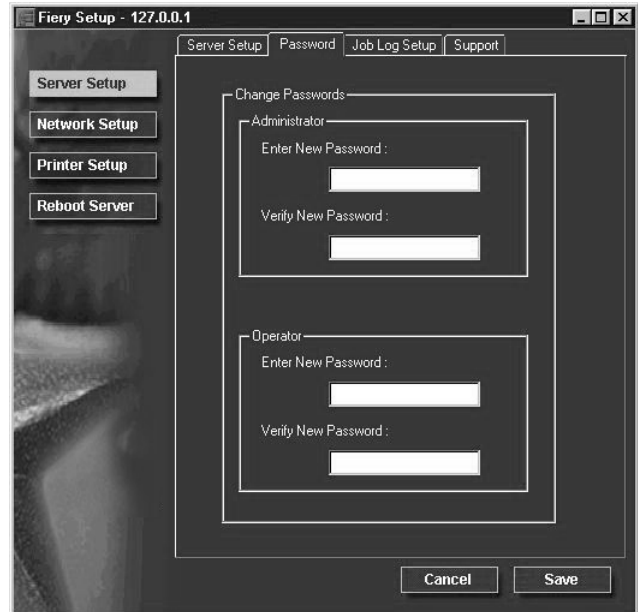

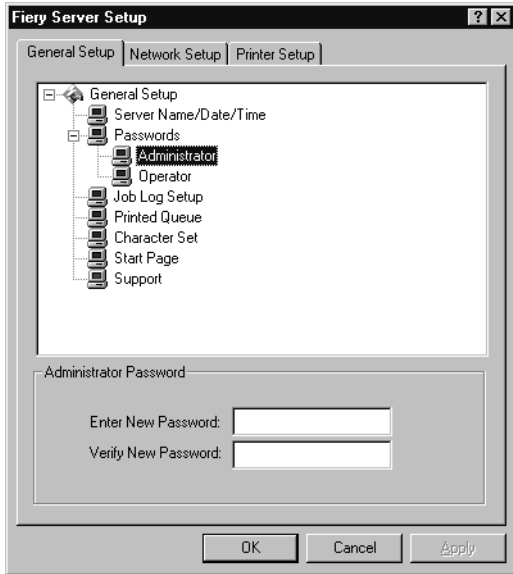

TO SET OR CHANGE A PASSWORD:

1. **Select the password you want to change.**

2. **Type the password in both the Enter New Password and the Verify New Password fields.**

   Passwords are case-sensitive and can be any combination of letters and numbers up to 19 characters. You must enter the password *exactly* the same way both times. The new password remains in effect until you change it again.

TO REMOVE A PASSWORD:

1. **Select the password you want to delete.**

2. **Delete the asterisks (*) in both the Enter New Password and the Verify New Password fields.**

If you forget the Administrator password, contact your authorized service representative to reinstall Fiery X40 system software. This clears the Administrator password and allows you to set a new one.

Job Log Setup
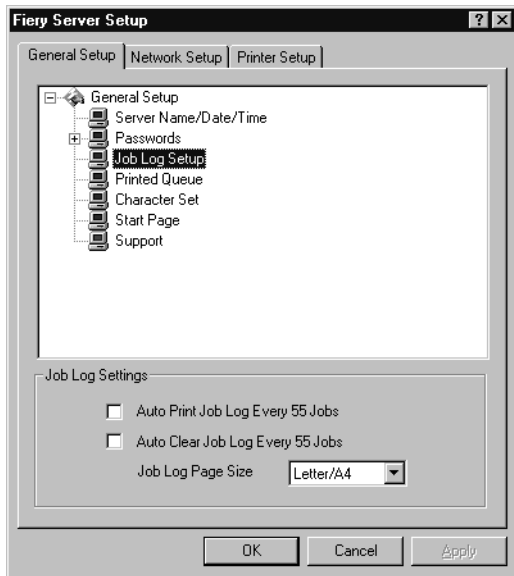

Auto Print Job Log Every 55 Jobs—Specify whether the Fiery X40 prints the Job Log after every 55 jobs. The Job Log lists the last 55 jobs processed on the Fiery X40, with accounting information about each one, including user name, document name, time and date printed, number of pages, and other job information.

Auto Clear Job Log Every 55 Jobs—Specify whether the Fiery X40 clears the Job Log after every 55 jobs. If you do not turn on this option, the Fiery X40 saves a file containing a record of all jobs ever printed. Since this file takes up space on the Fiery X40 hard disk, clearing the Job Log frees up additional disk space.

You can clear the Job Log manually at any time from the job management tools. The Job Log is also cleared when you clear the Fiery X40 with the Clear Server command.

Job Log Page Size—Select the size of paper to print the Job Log on.

Network Setup

Network Setup configures the Fiery X40 to receive print jobs over the networks that are used at your site. If the Fiery X40 is configured to enable more than one protocol, it automatically switches to the correct protocol when it receives a print job. When the parallel port and one or two network ports are enabled, print jobs can be received over all ports at the same time.

You can view and specify the following network settings in Network Setup:

• Adapters and ports—view currently configured network adapters and port settings

• Protocols—including AppleTalk, IPX/SPX, and TCP/IP

• Print Services—including LPD printing (TCP/IP), NetWare printing (PServer), Windows print sharing (SMB), HTTP support (WWW), and Port 9100 printing

Adapters/Ports

From local Setup only, the installed network boards are displayed. You cannot change this information. From remote Setup, you can enable Ethernet or Token Ring. You can also enable the parallel port, regardless of the network type you use. These options are described in the next section.
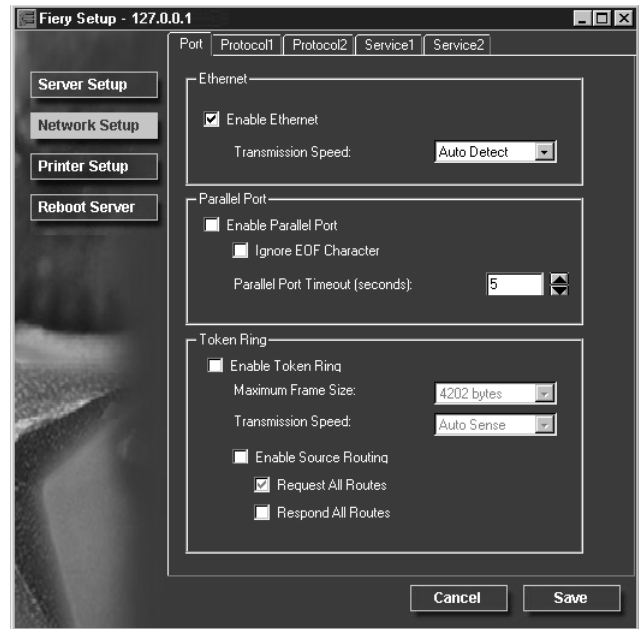

Ethernet (Port Setup)

Enable Ethernet—Select if the Fiery X40 is to be connected to an Ethernet network.

Transmission Speed—Select Auto Detect if your network environment is mixed, or select the speed (10 Mbps or 100 Mbps) of the network to which the Fiery X40 is attached.

Parallel Port (Port Setup)

Enable Parallel Port—Select if you want to print through the parallel port. You can connect a single Windows computer to the parallel port and print directly to the Fiery X40.

NOTE: Enabling the parallel port does not conflict with using Ethernet or Token Ring communication with the Fiery X40.

Ignore EOF Character—Available only if Enable Parallel Port is selected, this option specifies that the Fiery X40 should ignore end-of-file (EOF) messages. Check this box to print PostScript files in binary format (not ASCII); under normal circumstances, the box should not be checked. When this option is selected, the Fiery X40 uses the parallel port timeout value to determine when the end of the file has been reached.

Parallel Port Timeout (seconds)—Available only if Enable Parallel Port is selected, this setting determines how long the Fiery X40 waits without receiving data from the parallel port before deciding that the current job is complete. Until the timeout, the Fiery X40 cannot receive new jobs through the parallel port, but it can continue to receive network print jobs.

Token Ring (Port Setup)

Enable Token Ring—Select if the Fiery X40 is connected to a Token Ring network.

Maximum Frame Size—Select the maximum frame size recommended by the network administrator at your site. If you are uncertain of the setting to use, select the default value (4202).

Transmission Speed—Select Auto Sense if your network environment is mixed, or select the speed (4 Mbps or 16 Mbps) of the network to which the Fiery X40 is attached.

Enable Source Routing—Select if your network supports source routing.

Request All Routes—This option is active only if you enabled Source Routing. Select if you want the Request packet to travel to its destination by all routes.

Respond All Routes—This option is available only if the previous option is not selected. Select if you want the Response packet to return by all routes to the originating computer.

4
Protocols

You can change AppleTalk, IPX/SPX, and TCP/IP protocol settings for the Fiery X40. From remote Setup, you change these settings on the Protocol1 and Protocol2 tabs. Local Setup works in conjunction with the Windows NT Network Control Panel. When you click the Modify or Advanced button next to the setting in local Setup, the system opens the Network Control Panel, where you complete the settings.

Unlike remote Setup, local Setup does not provide separate settings to enable a protocol and to configure it. For example, remote Setup has two settings for AppleTalk: one to enable AppleTalk, and the other to set the AppleTalk zone. In local Setup, there is only the setting for AppleTalk zone. By default, the AppleTalk, IPX/SPX, and TCP/IP protocols are installed and enabled. You can verify a protocol is enabled in the Bindings tab of the Network Control Panel.

TO CHANGE PROTOCOL SETTINGS IN LOCAL SETUP:

1. **Click the Modify or Advanced button next to the setting.**

   The Windows NT Network Control Panel opens.

2. **Click the Protocols tab.**

3. **Select the protocol to modify.**

   Unless you have installed additional protocols, the choices are AppleTalk, NWLink IPX/SPX Compatible Transport, and TCP/IP.

4. **Click Properties, make your selections, and click Apply.**

5. **Click OK to close the Properties dialog box.**

6. **Click OK to close the Network dialog box.**

   If you have disabled any of the protocols in this procedure, use the Bindings tab of the Windows NT Network Control Panel when you are ready to re-enable the protocols.

4

AppleTalk

The current AppleTalk zone is displayed.
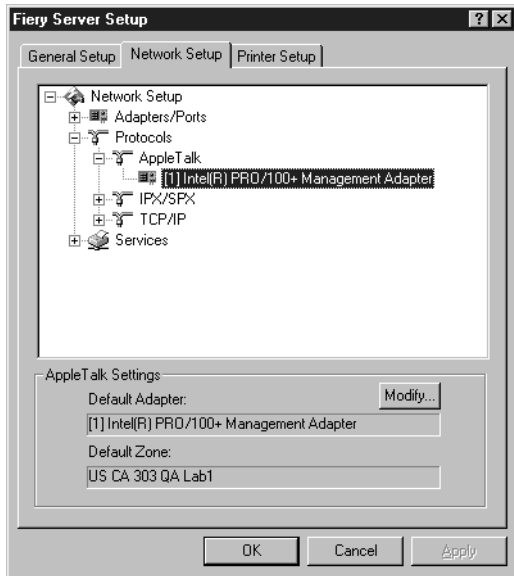

IPX/SPX

Use this option to specify IPX/SPX frame types.
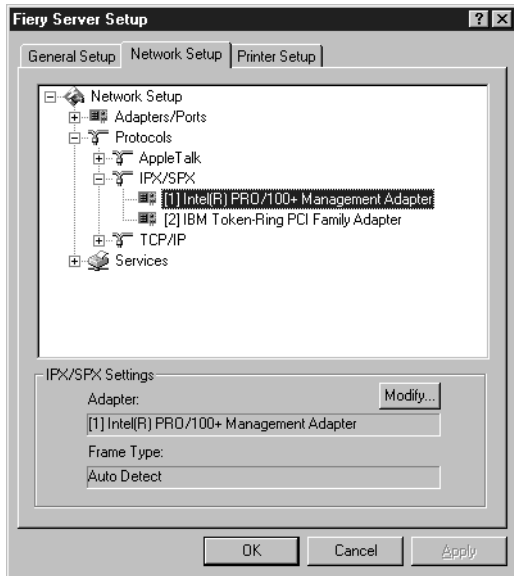

The Fiery X40 supports these following Ethernet frame types for IPX/SPX: Ethernet 802.2, Ethernet 802.3, Ethernet II, and Ethernet SNAP. For Token Ring, the supported frame types are Token Ring and Token Ring SNAP. You can also allow the Fiery X40 to select the frame type automatically.

TCP/IP

Specify TCP/IP settings. The current settings for IP address, subnet mask, and default gateway address are displayed. For information about setting up printing with TCP/IP, see Chapter 5.
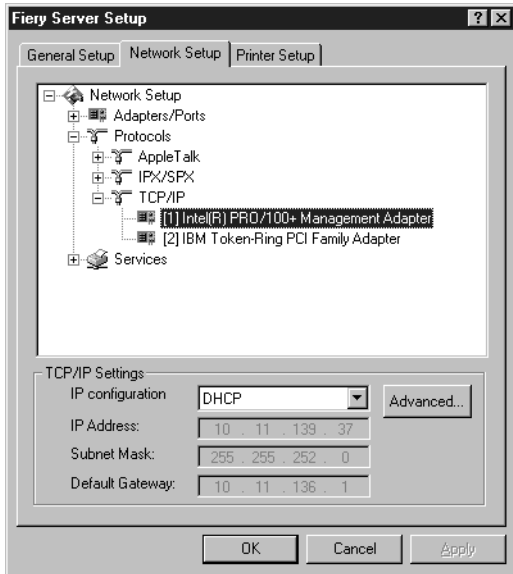

The Fiery X40 requires a unique, valid IP address. You can set a static address yourself, or specify that the Fiery X40 use DHCP, BOOTP, or RARP to obtain IP addresses automatically.

NOTE: If you specify the DHCP, BOOTP, or RARP protocol, the Fiery X40 reboots when you save your changes and exit Setup. Allow the Fiery X40 to reboot and return to Idle before printing a Configuration page or proceeding with any other operations.

To set the subnet mask, enter one of the following values:
255.0.0.0 if the IP address starts with a number less than 128
255.255.0.0 if the IP address starts with a number from 128 through 191
255.255.255.0 if the IP address starts with a number greater than 191

NOTE: Confirm the subnet mask setting with your network administrator before proceeding. In some cases the required setting may be different from those listed.

If your TCP/IP network has a gateway, and users outside the gateway plan to print to the Fiery X40 using TCP/IP, enter the gateway address.

In remote Setup, the Token Ring information appears even if you have not enabled Token Ring on the Fiery X40.

NOTE: The Fiery X40 stores assigned IP addresses even if you later disable TCP/IP. If you need to assign the Fiery X40 IP address to another device, first set the Fiery X40 address to a null address.

Services
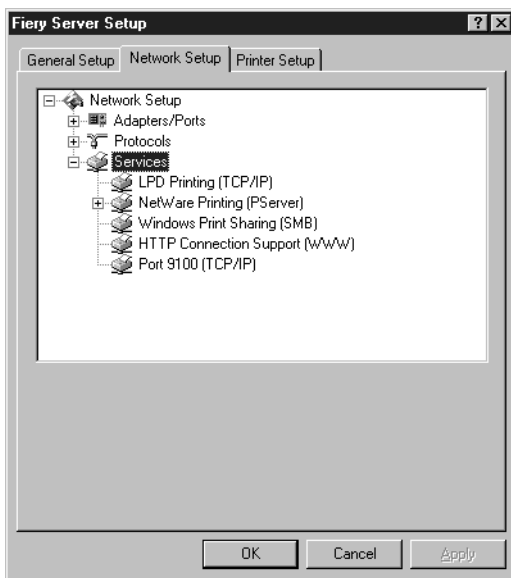

You can configure the following network services:

- LPD Printing (TCP/IP)—enable or disable LPD print services.

- NetWare Printing (PServer)—specify NDS and Bindery services (page 4-18).

- Windows Print Sharing (SMB)—enable or disable SMB print services.

- HTTP Support (WWW)—enable or disable support for Fiery WebTools.

- Port 9100—enable or disable support for Port 9100 printing.

LPD Printing
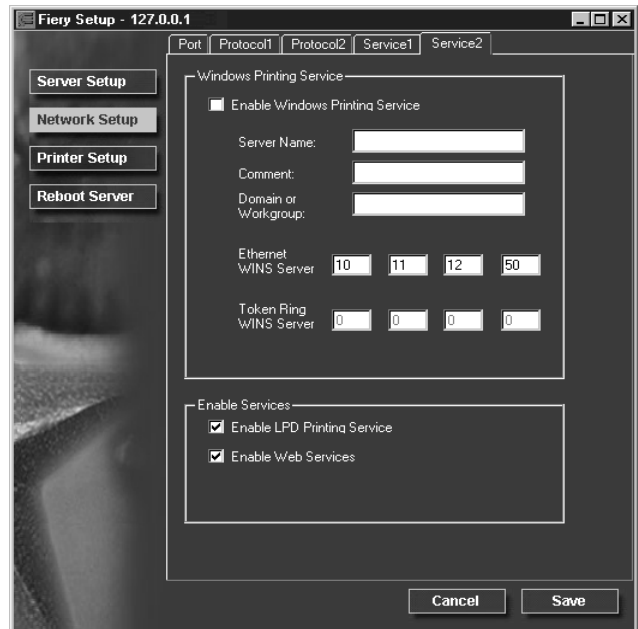

Enable LPD Print Services—Select to enable or disable LPD printing services.

4

NetWare Printing (PServer) options

The following procedures for setting up NetWare printing depict the windows from local Setup at the Fiery X40. If you use remote Setup, the procedures are similar.

- NDS Setup

- Bindery Setup

- Poll Interval

Setting up the Fiery X40 for NDS printing

Only one NDS tree can be connected. To specify or change the NDS Tree, click Modify and specify settings in the NDS Print Server dialog box as described below.

The currently selected NDS Tree and Print Server are displayed.

TO SPECIFY THE NDS TREE SETTING:

1. Check Enable NDS and click Modify.
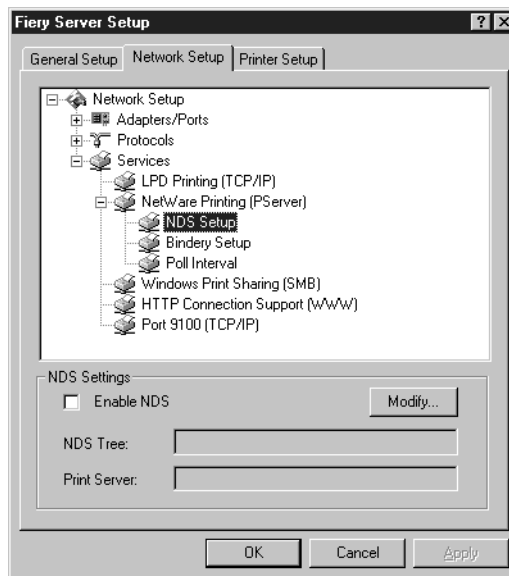

2. **In the NDS Connection window that appears, double-click an NDS tree in the first column.**
3. **Navigate to the NDS container and click OK.**

    If necessary, enter the password.
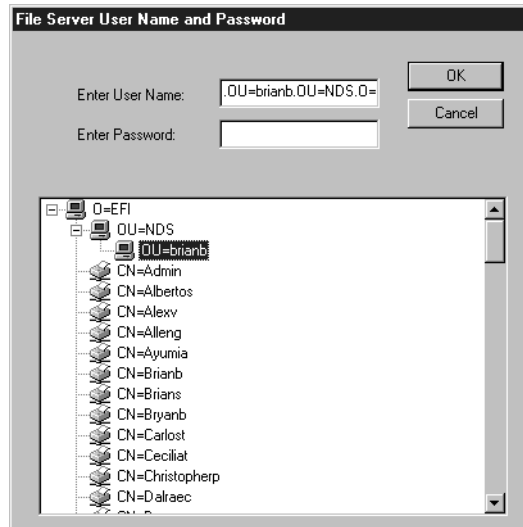

4. Select a Container from the center column.
5. Double-click a Print Server from the list on the right.

The full path to the Print Server is displayed.
Another way to change the path is to click Edit and type the path to the Print Server.

6. Click OK.

The Network Setup window appears, displaying the path to the selected Print Server.
Bindery Setup

Enable or disable Bindery services. The currently connected servers are displayed. A maximum of eight Bindery servers can be connected.
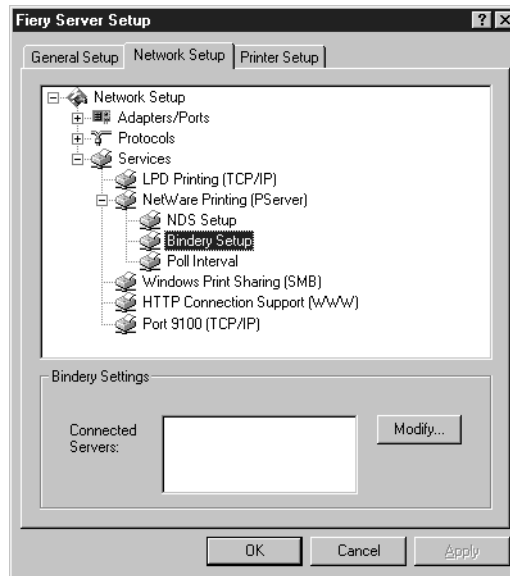

To add, remove, or change Bindery connections, click Modify and specify settings in the Bindery Connections dialog box as described below.

1. **Open the Bindery Connections dialog box by clicking Modify in the Bindery Setup dialog box.**

2. **Select a File Server from the list on the left.**
If necessary, enter the appropriate User Name and Password in the File Server User Name and Password dialog box to log in to the selected File Server.

3. **Select a Print Server from the list in the center and then click Add.**

The name of the newly added server appears in the Connected Servers list on the right.
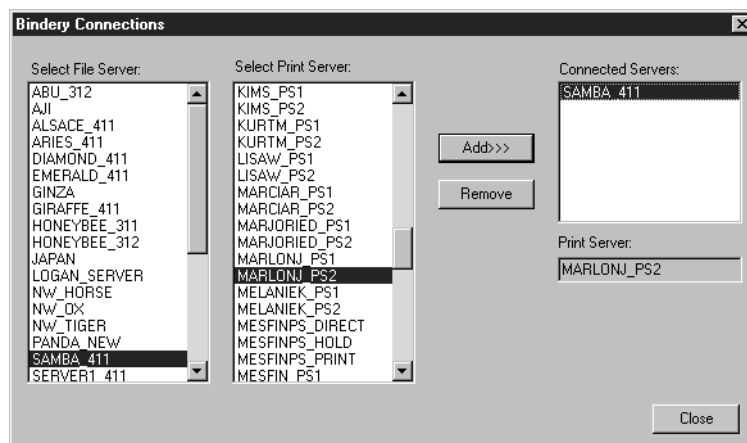

To add another server, repeat the previous steps. Up to eight servers can be connected.

4. When you have finished adding servers, click OK.

When you return to the Network Setup dialog box, the connected servers are displayed in the Bindery Settings area.

4
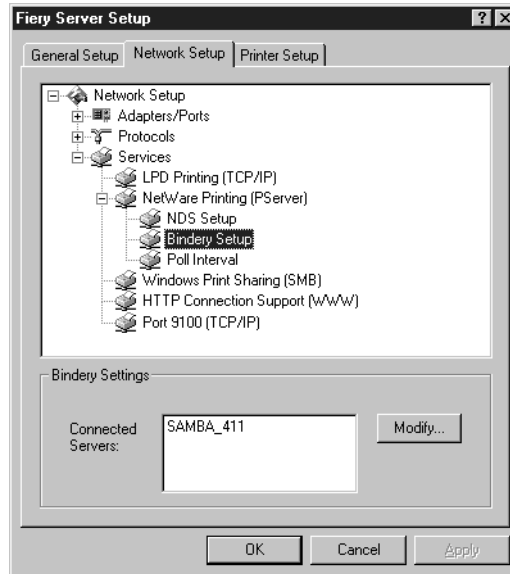

1. **Click Modify in the Bindery Setup dialog box.**

    The Bindery Connections dialog box opens.

2. **Select the File Server from the list on the left and the Print Server from the list in the center.**

    The name of the connected server appears in the Connected Servers list on the right.
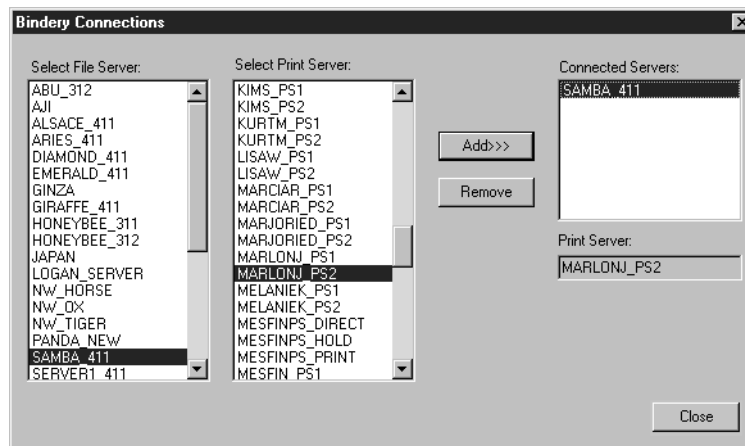

3. **With the File Server selected in the list of Connected Servers, click Remove.**

4. **Click OK.**

Poll Interval

Specify the polling interval (in seconds) for NetWare printing.
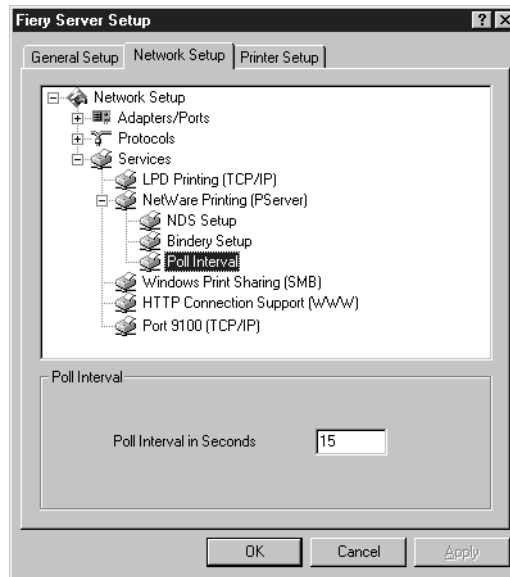

Windows Print Sharing (SMB)

For setting up the Windows printing service, these characters are allowed in the text fields: uppercase letters, numerals, space, and the following characters:
- _ . ~ ! @ # $ % ^ & ( ) { } \ ' , "

NOTE: Lowercase letters are *not* allowed, except in the Comment field.
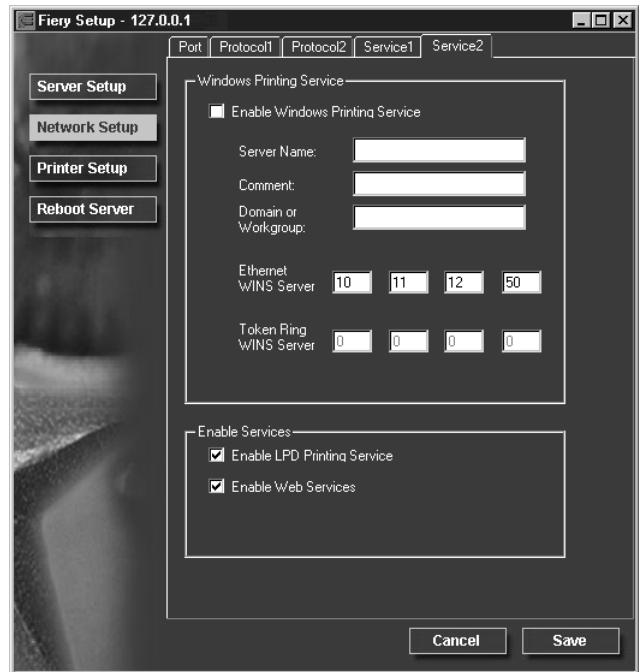

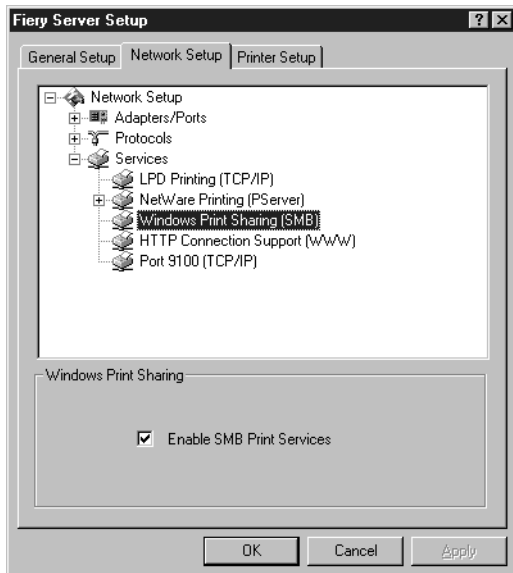

Enable Windows (SMB) Printing Service—Select to enable SMB (Server Message Block), the file and printer sharing protocol built into Windows. Enabling SMB allows the Fiery X40 to be listed on the network so that Windows clients can print to a particular print connection (Hold, Print, or Direct) on the Fiery X40 without any other networking software. For information on how to set up a Windows client for Windows printing, see *Getting Started*.

NOTE: Windows (SMB) printing runs over TCP/IP, so TCP/IP must be configured on the Fiery X40 and on workstations that use Windows printing.

The remaining options are found only in remote Setup. To change them with local Setup, use the Network Control Panel in Windows NT.

Server Name—The server name is the name that will appear on the network. It can, but does not have to, be the same name as the server name assigned to the Fiery X40 (see page 4-4).

Comment—You can enter information about the printer, up to 15 characters. These comments are listed in the Properties of the Fiery X40 in Network Neighborhood. Lowercase letters are allowed in this field.

Domain or Workgroup—Enter the workgroup or domain where the Fiery X40 should appear.

Ethernet WINS Server—Enter the IP address of the Ethernet WINS name server.

Token Ring WINS Server—Enter the IP address of the Token Ring WINS name server.

Broadcasts from SMB devices cannot be routed beyond their original network segment without a WINS name server. Setting up the WINS name server is outside the scope of this manual. To find out if a name server is available, contact your network administrator.

HTTP Connection Support (WWW)
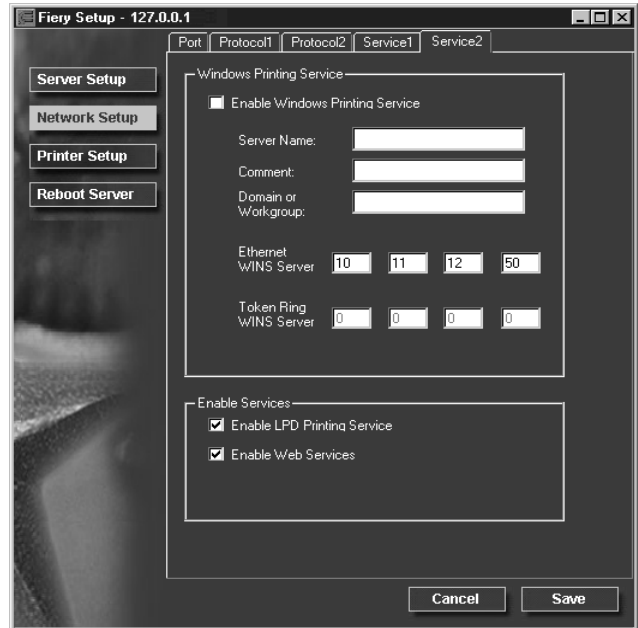

Enable Web Services—Select to make the Fiery WebTools available to users (see page 5-12). TCP/IP must already be enabled on the Fiery X40 and on user workstations. The Fiery WebTools include Fiery WebSpooler, Status, WebLink, WebSetup, WebDownloader, and Installer. A Java-enabled Web browser and a valid IP address are required for each user. See *Getting Started* for details on supported browsers and workstation requirements.

4
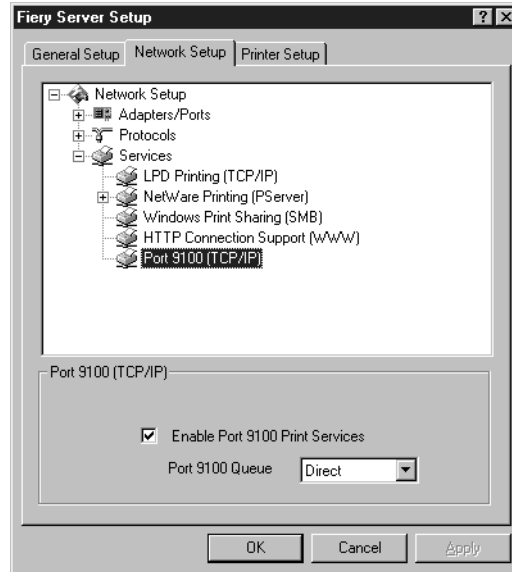

Port 9100 printing

These options are not available in remote Setup.

Enable Port 9100 Print Services—This option allows application programs to open a TCP/IP socket to the Fiery X40 at Port 9100 to download a print job.

Port 9100 Queue—You can attach Port 9100 to any of the published Fiery X40 print connections.

Printer Setup options

You can specify the following settings in the Printer Setup tab:

• Printer Connections

• PS (PostScript) Setup

• Color Setup

NOTE: In the following illustrations, "Device name" represents the model of the copier connected to the Fiery X40, which is X40.

Printer Connections

Specify whether to publish the Print Queue, Hold Queue, and the Direct Connection.
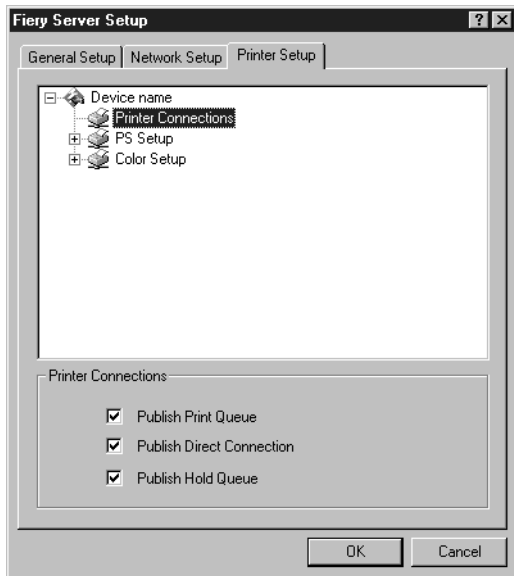

PS (PostScript) Setup

The options in the PS Setup menu in local Setup are located on the Paper Setup tab in remote Setup.

NOTE: In the following illustrations, "Device name" represents the model of the copier connected to the Fiery X40, which is X40.
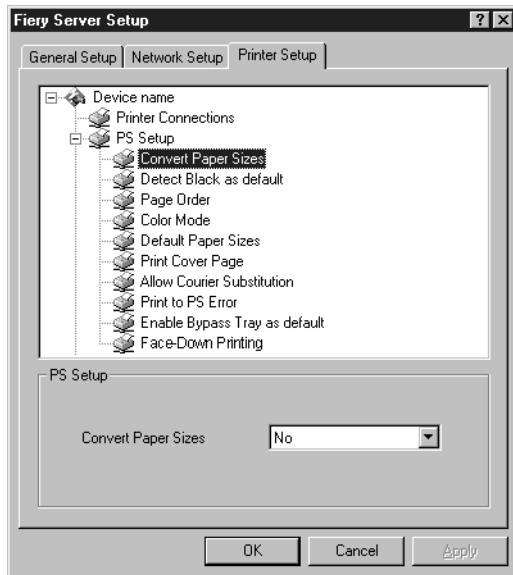

Convert Paper Sizes—Specify whether to convert paper sizes in documents automatically to the default paper sizes specified. For example, if you select Letter/ 11x17->A4/A3, a letter size job is automatically printed on A4 paper. If you select No, the Fiery X40 prints the job only if it finds a media source in the size specified by the job.

Color Mode—Specify whether to print color (CMYK) or Grayscale images to the Fiery X40 by default. CMYK gives you full color prints. Select CMYK as the Color Mode before performing calibration on the Fiery X40. Grayscale converts all colors into shades of gray.

4

Detect Black as Default—Select Yes to specify that jobs should be scanned before being printed to detect black-only pages. Black detection allows for accurate billing of black-and-white pages and increases the printing speed of jobs containing multiple black-only pages.

Page Order—Specify the page order for printed output. Forward prints pages in the order received, so that the last page is on the top of the stack and the first page is on the bottom. Reverse prints jobs in reverse order, so the first page is on the top of the stack and the last page is on the bottom.

Default Paper Sizes—Specify whether to print on US paper sizes (for example, letter, legal, tabloid), or Metric paper sizes (for example, A4 and A3) by default. When no page size is defined within a PostScript file, jobs are printed on letter-size paper if you select US, or A4 paper if you select Metric.

Print Cover Page—Specify whether the Fiery X40 prints a cover (job summary) page at the end of each print job. If this option is set to Yes, each print job is followed by a page containing the name of the user who sent the job, the document name, the server name, the time the job was printed, the number of pages printed, and the status of the job. If a PostScript error occurs and the Print to PS Error option is set to Yes, the Cover Page lists the PostScript error message instead of the job status.

Allow Courier Substitution—Specify whether to substitute Courier for unavailable fonts. When this option is off, jobs requiring fonts not available on the Fiery X40 hard drive generate a PostScript error and do not print. This setting does not apply to PDF files; font substitution occurs automatically for PDF files.

Print to PS Error—Specify whether the Fiery X40 should print the available portion of a print job when it encounters a PostScript error. In general, this option should be set to No.

• When this option is set to No, printing of the entire job is canceled when a PostScript error occurs, but the processed portion of the job and the PostScript error information are stored on the Fiery X40. You can view the job and the error information from the job management tools.

• When this option is set to Yes, the portion of the job processed before the error occurred is printed.

4-34 Setting up the Fiery X40 from a Windows Computer

Enable Bypass Tray as default—Specify whether jobs should be printed from the bypass tray. Use this option to enable printing from the bypass tray when tray selection is not otherwise available in the interface, such as when printing from the command line (lpd or DOS). In general, turn off this option when the interface permits tray selection on a job-by-job basis.

Face-Down Printing—Specify whether to have printed output exit the copier face-down.

Color Setup

The color job defaults can be overridden on a job-by-job basis in these ways:

• A user can specify a different setting at print time from the printer driver.

• An administrator or operator can specify a different setting from the job management tools after the job has been sent to the Fiery X40.

Some color options, such as CMYK Simulation, cannot be set from remote Setup. Use local Setup or the Fiery X40 Control Panel instead. For more information on settings for color options, see the *Color Guide* and Appendix A of the *Printing Guide*.

4

NOTE: In the following illustrations, "Device name" represents the model of the copier connected to the Fiery X40, which is X40.
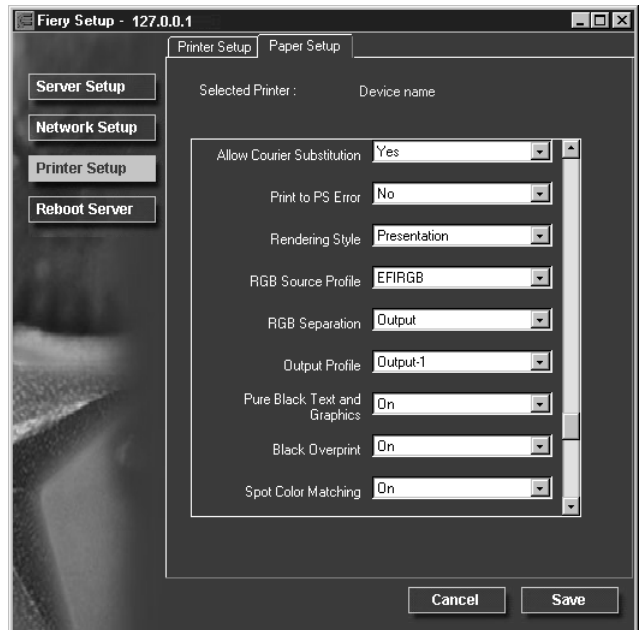

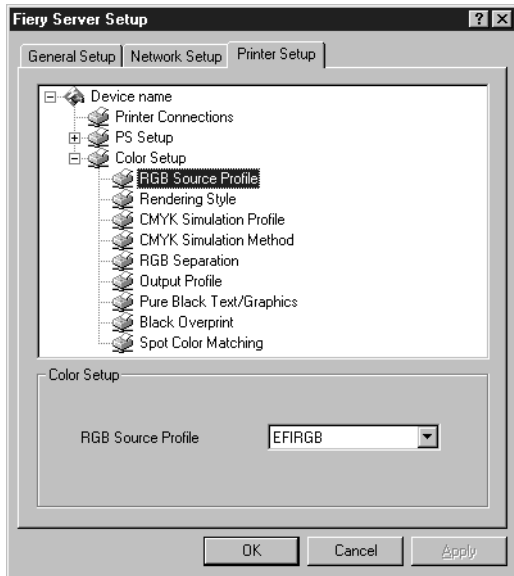

RGB Source Profile—Specify the RGB source space to be applied to RGB data.

Rendering Style—Specify the Rendering Style to be applied to RGB data.

CMYK Simulation Profile—Specify the simulation to be applied to CMYK data.

CMYK Simulation Method—Specify the simulation method to be used.

RGB Separation—This option defines how the Fiery X40 processes RGB jobs. Select Output for RGB jobs that you print to the final output device. Select Simulation to simulate an output device that is not the device to which you are printing.

Output Profile—Specify the output profile to use for printing. Additional profiles can be created and downloaded to the Fiery X40 with ColorWise Pro Tools.

Pure Black Text/Graphics—Specify whether to optimize black text and line art. This option also minimizes toner use for documents containing both color and black-only pages.

When this option is on, black text and line art are printed with black toner only. When this option is off, black text and line art are printed using all four colors of toner.

Black Overprint—When this option is on, black text overprints on colored backgrounds. With this option is off, black text knocks out color backgrounds. In general, this option should be on.

Spot Color Matching—When this option is on, the Fiery X40 uses an internal lookup table to print the best equivalents of PANTONE colors. When this option is off, PANTONE colors are printed using the CMYK values defined in the originating applications.

Exiting Setup

When you have finished specifying Setup options, click OK and close the Setup dialog box. You are notified that the Fiery X40 must be restarted for the new settings to take effect and given the choice to reboot now or later. If the Command WorkStation is running, the connection to the Fiery X40 is lost and you must log in again when the Server has finished restarting.

If you changed the network configuration or other settings affecting Windows NT Workstation, you must reboot Windows NT for those changes to take effect.

After you have completed Setup and rebooted the Fiery X40 for the first time, install user software for printing on remote workstations as described in *Getting Started*. To confirm the network connection and your Setup, print a test job from a remote workstation.

Printing the Configuration page

The Configuration page lists the settings in effect for the current Setup. After you have performed Setup, print a Configuration page to confirm your settings.

The other pages you can print from the Command WorkStation include the test page, Job Log, color charts, and font list. For information on these Fiery X40 pages, see the *Job Management Guide*.

TO PRINT THE CONFIGURATION PAGE:

1. **At the Command WorkStation, choose Print Pages from the File menu.**

2. **Click Configuration.**

3. **Click Print.**

   Post the current Configuration page near the server for quick reference. Users need the information on this page, such as the current printer default settings.

**Chapter 5:
Setting up
Network Servers**

This chapter describes environments that typically include one or more network servers—Novell NetWare, Windows NT 4.0, and Windows 2000 servers—that share printing to the Fiery X40. It describes setting up servers that use IPX/SPX or TCP/IP protocols for communicating with the Fiery X40. In addition, it includes guidelines for setting up direct communication from Windows NT 4.0 workstations and UNIX workstations, where a network server is optional. The chapter also outlines the requirements for users to print to the Fiery X40 and to run the Fiery utilities and Fiery WebTools.

The Fiery X40 can accept jobs concurrently from NetWare, Windows NT 4.0, and AppleShare servers, as well as jobs sent directly from Windows NT 4.0 or UNIX workstations. Because AppleShare servers require no special configuration, they are not discussed in this chapter, except for use in a Windows NT 4.0 environment (see "Fiery X40 on a TCP/IP network with Windows NT 4.0" on page 5-8).

If your network is based on Windows NT 4.0, proceed to page 5-8. For information on UNIX workstations, proceed to page 5-14.

Support for Fiery utilities

The following table describes the Fiery utilities supported over each protocol and Windows platform. More information is provided in later sections, according to your network type.

Fiery utility	Windows 95/98/2000 IPX	Windows 95/98/2000 TCP/IP	Windows NT 4.0 IPX	Windows NT 4.0 TCP/IP
ColorWise Pro Tools	—	√	—	√
Command WorkStation	—	√	—	√
Fiery Downloader	√	√	√	√

Fiery X40 on a NetWare 3.x, 4.x, or 5.x network

The NetWise™ features built into the Fiery X40 support the following network operating environments:

- NetWare 4.x or 5.x—NDS (Novell Directory Services)
- NetWare 3.x—Bindery services
- Servers running NetWare 4.x or 5.x in bindery emulation mode

For Ethernet-based networks, the IPX/SPX protocol is supported. For Token Ring-based NetWare networks, both IPX/SPX and TCP/IP are supported.

NOTE: Setting up a NetWare environment correctly requires the presence and active cooperation of the Novell network administrator. You must have administrator privileges on the network to create new NDS or bindery objects.

The term "bindery server" is used to refer to a Novell file server running NetWare 3.x, or running NetWare 4.x or 5.x in emulation mode. The term "NDS" is used to describe components of a NetWare operating system running NetWare 4.x or 5.x in native mode.

NetWare clients print to the Fiery X40 through the Novell network server. Server setup and client network setup are outlined in this chapter. Client printing setup is described in *Getting Started,* and printing is described in the *Printing Guide.*

The Fiery X40 can receive print jobs from NetWare clients over Ethernet or Token Ring network topologies. (Appendix A describes the Token Ring option.) During Fiery X40 Setup, you select the frame type or types that will be used for communication between the Fiery X40 and network servers. Frame type refers to the format of a communications packet; frame types are specified in a startup file when the NetWare server (or any other workstation) loads its network drivers.

For the Fiery utilities that have Windows 95/98/2000 support over IPX, the Windows 95/98/2000 workstations are communicating with the Fiery X40 directly, not through the NetWare server. For more information on the platforms supporting utilities, see page 5-1.

Tips for experts—IPX networks

Setting up the Fiery X40 is similar to setting up any other PostScript printer on the network. The following information is useful for experienced network administrators.

The Fiery X40 with IPX connections has these characteristics:

- **Both NetWare 3.x and NetWare 4.x are supported directly. NetWare 4.x is also supported through bindery emulation.**

- **A minimum connection to the Fiery X40 consists of a NetWare file server, a NetWare print server, and a NetWare queue.**

- **A single directory tree (for NetWare 4.x) and up to eight bindery servers can be configured simultaneously.**

  This limit is the same regardless of whether the Fiery X40 is connected to the network via Ethernet, via Token Ring, or both.

- **The Fiery X40 looks for print jobs on one NetWare print server per bindery server.**

- **Each print server can store jobs for any print connection on the Fiery X40.**

- **Windows 95/98/2000 workstations (whether a Novell server is present or not) can use IPX/SPX protocols for communicating with the Fiery X40 directly to use Fiery utilities.**

Overview of IPX printing to the Fiery X40

NetWare file servers support the creation of print queues, which are storage areas for print jobs. When a client on a remote computer decides to print, the job is directed to a print queue on the NetWare file server and spooled to the NetWare server disk, freeing up the client workstation.

The queues on the NetWare server must be named to match the Direct connection, Hold queue, and Print queue on the Fiery X40. The NetWare queue names should be given an extension corresponding to the Fiery X40 print connection, as follows:

_print
_hold
_direct

NOTE: These extension names must be in English and in all lowercase letters.

There is no need to rerun Setup when adding or removing a NetWare queue; however you should reboot the Fiery X40 after a queue is created or removed.

When the Fiery X40 is configured to connect to a NetWare server, it polls the NetWare server for jobs in each of its queues. If jobs are found, they are automatically transferred over the network to the matching connection on the Fiery X40. For example, jobs from the NetWare queue with the _print extension are sent to the Fiery X40 Print queue, and so on. While a job is processed and printed, a record of the job is being created. You can access the Job Log containing these records at any time.

Configuring a NetWare 3.x or 4.x server for printing

The following sections explain how to set up a NetWare file server so that networked users can print to the Fiery X40 from their workstations, and the Fiery X40 can obtain print jobs from the NetWare server.

For *each* NetWare file server that you configure, follow these general steps. More detail is provided in subsequent sections and in your NetWare documentation.

• Make sure the server is connected to a functioning IPX network.

• Log in as the Supervisor on a PC connected to the NetWare file server.

• For NetWare 4.x installations, set up an NDS connection (see page 5-6).

• For NetWare 4.x in emulation mode, set the bindery context (see page 5-6).

• For NetWare 3.x and for NetWare 4.x in bindery emulation, set up a file server, a print server, and a print queue for the Fiery X40 (see page 5-7).

With bindery services, you can route all Fiery X40 print jobs through the same NetWare file server, or you can configure more than one file server to handle Fiery X40 jobs.

The functions you perform on the Novell server, on the Fiery X40, and on the client workstation, are summarized in the following tables. The first table applies to NDS connections, the second to bindery connections. Complete the operations in the left column, then the center column, then the right column.

Configuring an NDS connection

Abbreviations:

FS = file server

PS = print server

PQ = print queue (on the NetWare server)

On NDS FS:	In Setup from the Command WorkStation:	On client workstation:
In NETADMIN: Create NDS PQs Create NDS printer and assign PQs Create PS and assign the printer Configure users of the PQs	**Port Setup** Ethernet Setup **Protocol Setup** IPX/SPX Setup—select frame types **Service Setup** PServer Setup and NDS Setup Select Root Browse to select PS Specify PQ search root (optional) Set Polling Interval	Install user software For printing: Connect client to PQs that you set up on the NetWare FS (associated with the PS selected in NDS Setup) For running the Fiery utilities: Configure the connection to the Fiery X40

Configuring a bindery connection

On Bindery FS:	In Setup from the Command WorkStation:	On client workstation:
In PCONSOLE: Select NetWare FS (up to 8) For each FS: Configure PS Configure PQ Configure users of the PQ	**Port Setup** Ethernet Setup **Protocol Setup** IPX/SPX Setup—select frame types **Service Setup** PServer Setup and Bindery Setup Add FS (up to 8) Set Polling Interval	Install user software For printing: Connect client to PQs that you set up on the NetWare FS (associated with the PS selected in Bindery Setup) For running the Fiery utilities: Configure the connection to the Fiery X40

Setting up an NDS connection

In NDS, all NetWare entities (objects) are organized in a hierarchical tree structure. Objects have a name, properties, and a context which defines the location of the object in the directory tree. For the Fiery X40 you are mainly concerned with defining a printer, a print server object and one or more print queue objects. Objects are created in NetWare administrator programs such as PCONSOLE, NETADMIN, or NetWare Administrator.

The top-level tree object is known as the [Root] object. The name of the [Root] object is also the name of the tree. Below the [Root] are other objects: either containers (which consist of other objects) or leaf objects (which do not contain other objects). Access to objects is controlled by rights that are defined as properties of each object. Rights are established by network administrators.

Setting the NetWare 4.x bindery context

You can connect only one directory tree to the Fiery X40. If you need to connect additional NetWare 4.x servers, you can do so by using bindery emulation, which causes the 4.x server to behave like and be accepted as a NetWare 3.x server.

NOTE: The file server selected must not be in the same tree as that selected in NDS Setup.

Up to eight bindery servers, whether in native 3.x mode or in 4.x emulation, can connect to the Fiery X40. If your server is using NetWare 3.x, proceed to "Setting up a NetWare print queue for bindery" on page 5-7.

In order to set up the NetWare 4.x server in bindery emulation mode for printing to the Fiery X40, the network administrator must do the following:

• Determine the Directory Services path to the container in which the print server and the print queue for the Fiery X40 will be created.

  The container defines the "bindery context" for your network structure.

• Edit the network startup file to set the bindery context.

• Activate the new bindery context.

Setting up a NetWare print queue for bindery

For NetWare 3.x and for 4.x in emulation, the NetWare print server and print queue for Fiery X40 are created and configured from NetWare Print Console (PCONSOLE), a NetWare utility that is stored in NetWare's PUBLIC directory.

As with NDS, first you create several NetWare entities on a Novell server, then you select them in Network Setup (see page 3-26).

Setting up NetWare Windows clients for printing

Before setting up client workstations for printing, make sure you perform Network Setup (see page 3-9), and that the settings reflect the entities you created in the NetWare administrator utilities (see page 5-4).

NOTE: For printing to the Fiery X40, connect all Windows clients to a Novell NetWare server and permit them to connect to the Netware print server or servers on which you defined a NetWare print queue for the Fiery X40.

After the Novell server and the Fiery X40 have been set up, client setup consists of:

• Installing the networking protocol, binding it to the network adapter card, and permitting the client to log in to the NetWare file server.

On Windows 95/98/2000 workstations, both the IPX/SPX-compatible protocol and the Client for NetWare Networks should be loaded from the Network Control Panel.

On Windows NT 4.0 workstations, install Client Services for NetWare. Use the CSNW option in Control Panel to set printing options and specify a preferred NetWare server.

• Setting up the Fiery X40 as a PostScript printer by installing a PostScript printer driver and the Fiery X40 PPD (PostScript printer description).

• Adding a network port and connecting the workstation to one or more NetWare queues that have been defined for the Fiery X40.

See *Getting Started* for details on how to connect Windows 95/98/2000 and Windows NT 4.0 workstations.

• Installing Fiery X40 software, such as color reference files.

See *Getting Started* for details.

Fiery X40 on a TCP/IP network with Windows NT 4.0

When a Windows NT 4.0 computer is configured to connect to the Fiery X40 using TCP/IP, it can print directly to the Fiery X40. If the computer shares the printer over the network, it is acting as a print server to Windows NT 4.0 clients. Client machines print to the Fiery X40 by printing to the Windows NT 4.0 print server. Printing can then be monitored and controlled at the Windows NT 4.0 server machine.

With TCP/IP protocols loaded, you can run the Fiery utilities and Fiery WebTools from a Windows NT 4.0 or Windows 95/98/2000 computer.

The Windows NT 4.0 server can also use AppleTalk protocols for printing to the Fiery X40 as an alternative to TCP/IP. When creating a printer to share with AppleTalk users, do not "capture" the printer. Capturing the printer forces all users to print to the server rather than directly to the printer. If you capture the printer, Fiery X40 print connections will not appear in the Mac OS Chooser.

Tips for experts—Windows NT 4.0 with TCP/IP

Setting up printing from Windows NT 4.0 using TCP/IP protocols is similar in some respects to setting up UNIX workstations with TCP/IP. When TCP/IP network connections are made from Windows NT 4.0 workstations, note the following:

- **Make sure you have a valid IP address for the Fiery X40 and for any workstations that will print to it or run the Fiery utilities.**

- **In Fiery X40 Setup, enable TCP/IP and enter the IP address, Subnet mask, and Gateway address for the Fiery X40.**

  You can enter these addresses manually or use DHCP, RARP, or BOOTP protocols to assign them dynamically.

- **Make sure the Fiery X40 name and address are listed in a domain name server (DNS) or hosts name database used by your system.**

- **Make sure the system host table includes the correct internal name for the Fiery X40 as a remote printer.**

  See page 5-15 for more information.

• **For Windows NT 4.0, install the appropriate printer driver files on the Windows NT 4.0 server.**

For more information, see *Getting Started.*

• **Repeat the installation for everyone who prints to the Fiery X40.**

Each server and workstation running the Fiery utilities with TCP/IP also needs the TCP/IP protocol and the Fiery utility software.

Configuring a Windows NT 4.0 server to support the Fiery X40

To configure a Windows NT 4.0 server to communicate with the Fiery X40, follow these general steps. Configuring a Windows 2000 server is similar. More detail is provided in subsequent sections and in your Microsoft documentation.

• Load the TCP/IP network protocol on the server and configure it with an IP address, subnet mask, and gateway.

• Enter the host name of the Fiery X40 in the host database used by your system (see page 5-10).

• Perform Fiery X40 Setup.

• On the Windows NT 4.0 server, create a printer for each Fiery X40 print connection, install the appropriate printer drivers and (optionally) share the printer on the network (see page 5-11).

• Enter the host name and remote printer name of the Fiery X40 in the printer connection. See page 5-15 for more information.

• If the Windows NT 4.0 server is also a workstation, install the Fiery utilities (see *Getting Started*).

Adding the Fiery X40 to the TCP/IP network

If your TCP/IP network consists of Windows NT 4.0 servers and Windows NT 4.0 clients, use the directions in this section. If the network also includes UNIX workstations, also refer to the directions on page 5-15.

TO ADD THE FIERY X40 TO A TCP/IP NETWORK WITH A WINDOWS NT 4.0 SERVER:

1. **Register the IP address of the Fiery X40 in the host name database used by your system.**

   For installations that don't have a network administrator or a central host name database, add the Fiery X40 to the hosts file on the Windows NT 4.0 server. Also add it to the hosts file on any workstations that have TCP/IP loaded and will use the Fiery utilities.

   The Windows NT 4.0 hosts file provides compatibility with the UNIX hosts file. The hosts file is used as a local Domain Name Services (DNS) equivalent. It has the same format as the /etc/hosts file on UNIX servers. The format of the hosts entry is:

   IP Address<TAB>host name<TAB>#comments

   where <TAB> indicates that you press the Tab key.

   To determine the IP Address and Server Name of your system, print a Configuration page (see page 3-45).

   NOTE: If the Fiery X40 has already been defined in an /etc/hosts file or equivalent host name database on a UNIX workstation on your network, it is recommended that you use the same host name here as you used for the name of the remote printer in the /etc/printcap file.

2. **Perform Fiery X40 Setup to support TCP/IP printing.**

   Enter the options in Protocol Setup (IP address of the Fiery X40, Subnet mask, and Gateway address).

Installing the Fiery X40 as a shared printer

The first step in creating a printer is installing the printer driver files, which give your applications access to printer features. The installation instructions in *Getting Started* can be used for every workstation that will print directly and independently to the Fiery X40. However, if you are an administrator running Windows NT 4.0 Server or Windows NT 4.0 Workstation, you can also create a printer and share it with clients on the network. When a printer is shared, clients who are not able or are not given permission to establish an independent network connection to the Fiery X40 can still print through the server.

You can specify sharing of the printer during installation of the Fiery X40 printer files. If you have not yet installed the Fiery X40 printer files on the Windows NT 4.0 print server computer, do so now following the instructions in *Getting Started.* During installation, enter the information necessary to share the Fiery X40.

If you have already installed the Fiery X40 printer files on the computer you are using as an NT 4.0 print server, see your Windows documentation for information about sharing the Fiery X40.

If more than one Fiery X40 print connection is published (for example, if both the Print queue and the Hold queue are published), you may wish to create a printer for each print connection so that you and other users can print to each connection directly. When prompted to specify the printer name, enter a name that indicates the Fiery X40 print connection.

Configuring clients of a Windows NT 4.0 server

Each client of a Windows NT 4.0 server is already using a network protocol to communicate with the server. Each client can print to the Fiery X40 if it has been shared by a Windows NT 4.0 Server or Windows NT 4.0 Workstation computer. In that case, the client does not have to use the same network protocol to connect to the Windows NT 4.0 server as the server uses to communicate with the Fiery X40.

- **For Windows NT 4.0 Workstation clients, before printing, connect to the print server computer and select the Fiery X40. Right-click and choose the Open command.**

  When prompted, click Yes to have Windows set up the printer.

  After clients have selected the printer, they can choose it from the Print Setup, Page Setup or Print dialog box of their application. Clients can change printing options for their own job, but printer properties are grayed and not available for changing. When a client chooses Print, the job is transmitted to the Windows NT 4.0 print server, and from there to the selected print connection on the Fiery X40. The job is listed in the Print Manager on the client workstation, and the administrator can track it in the Fiery X40 window in the Print Manager on the Windows NT 4.0 print server.

Configuring the Fiery X40 and clients for Fiery WebTools

The Fiery WebTools provide access to many Fiery X40 functions via the Internet (or intranet), providing additional flexibility in remote management. You can access the Fiery WebTools from a Windows 95/98/2000, Windows NT 4.0, or Mac OS computer.

NOTE: Fiery WebSetup is supported for Windows 95/98/2000 and Windows NT 4.0 computers only.

1. **In Fiery X40 Network Setup, enable TCP/IP.**

2. **Set a valid, unique IP Address for the Fiery X40, and then set the subnet mask. Set a gateway address if necessary.**

3. **Enable Web Services.**

4. **In Fiery X40 Printer Setup, confirm the Print Queue is published.**

1. **Enable TCP/IP networking.**

2. **Assign the workstation a valid, unique IP address and subnet mask, and a gateway address if needed.**

3. **Install an Internet browser that supports the Java language and frames.**

    Make sure Java is enabled. See *Getting Started* for more information on supported browsers and on Fiery WebTools requirements.

1. **Start the Internet browser.**

2. **Enter the IP address or DNS name of the Fiery X40.**

3. **Press Enter.**

    The Fiery X40 home page appears. Click the name of a particular WebTool to use it.

4. **Use the Configure button to enable only certain WebTools for users.**

Setting the WebLink destination

The pre-set WebLink destination can be changed; this function requires the Administrator password, if one has been set.

1. **Start your Internet browser application.**

2. **Enter the IP address or the DNS name of the Fiery X40.**

    The Fiery X40 home page appears.

3. **Enter the Administrator password (if required) and click OK.**

4. **Press the Control key (Mac OS) or Ctrl key (Windows) as you click the WebLink button.**

    The Update WebLink dialog box appears.

5. **Enter the new WebLink address (URL) and click OK.**

Fiery X40 on a network with UNIX workstations

When a UNIX workstation is configured with the lpd protocol, and connected to the Fiery X40 over a TCP/IP network, it can print directly to the Fiery X40.

Setting up UNIX workstations requires an administrator with root privileges. After the initial configuration, UNIX users simply submit print jobs to a named printer.

The job management tools, along with the other Fiery utilities and Fiery WebTools, are not available on the UNIX platform. A Windows or Mac OS computer on the same network as the UNIX computer that is set up to use TCP/IP for printing to the Fiery X40 can use the job management tools to manage print jobs that originate from all workstations on the network.

Tips for experts—UNIX workstations

Setting up the Fiery X40 in a UNIX environment has the same requirements as setting up any printer or new device:

• **A distinct IP address is needed for the Fiery X40 as well as for each workstation on the network.**

• **You select a name for the Fiery X40 that goes with the IP address.**

• **The IP address of the Fiery X40 must be registered for the network in a host database, and also on the Fiery X40 itself.**

• **The Print queue or the Hold queue (or both) must be published.**

Lpd printing to the Direct connection is not supported.

The following information applies especially to the Fiery X40:

• **Fiery X40 is a printer controller that understands lpd protocols.**

• **Fiery X40 has a remote printer name you must use in order to communicate with it successfully.**

See the next section for details.

Important note about the remote printer name

Whichever UNIX system you use, the name used for remote printer (or rp in the /etc/printcap file) in configuring the Fiery X40 must be one of the following:

print
hold

The remote printer name is also used when setting up your Windows NT 4.0 workstation or server to connect to the Fiery X40 over TCP/IP. Enter the remote printer name when you set up your Windows NT 4.0 printer, as the "Name of printer or print queue on that (lpd host) server" in the Add LPR Compatible Printer dialog box (see *Getting Started*).

Setting up the Fiery X40 on TCP/IP networks

Every machine (host) on a TCP/IP network, including the Fiery X40, must have a unique 32-bit internet address (IP address). Contact your network administrator to obtain an address for the Fiery X40. Workstations on a TCP/IP network can print directly to the Fiery X40 as a remote printer, or can print to a Windows NT 4.0 server or UNIX workstation acting as a print server. Since the Fiery X40 spools jobs and acts as a print server, there is no advantage in placing another print server between a workstation and the Fiery X40. If you choose to do so, however, there is no difference in setup except that a client machine does not have its own spooling area.

TO SET UP FIERY X40 PRINTING ON UNIX SYSTEMS:

1. **Specify the appropriate settings in Fiery X40 Server Setup.**

    To access Fiery X40 Setup, see page 3-4.

2. **Specify the appropriate settings in Fiery X40 Network Setup.**

    Enter a valid IP address, subnet mask and gateway address for the Fiery X40.

3. **Specify the appropriate settings in Fiery X40 Printer Setup.**

    Publish the Print queue and/or the Hold queue.

To set up TCP/IP for communication with the Fiery X40:

1. **A superuser (with root login) must add the Fiery X40 to the network's IP host table or other system database of network printers.**

2. **In the file or utility used by your network, specify the remote printer name, the print server protocol, the queue, and the spool file for the Fiery X40 name you assigned.**

3. **Make the Fiery X40 available as a printer to other network users.**

4. **To verify the TCP/IP connection, ping the IP address or the host name. From any computer on the network, at the command prompt, type:**

   ping <IP address>

   Type the Fiery X40 IP address assigned in Fiery X40 Network Setup.

   After the Fiery X40 is set up as a network printer, you can also ping the name you gave to the Fiery X40:

   ping <hostname>

   The server should respond with a message such as

   Reply from <IP address> ...

   Some systems will respond with a continuous display of output from the IP address. To stop the output, type Control-C. You can use the ping command at any time.

To print to the Fiery X40:

- **On a UNIX system running SunOS 4.x or other BSD-based variant, use the lpr command to send a job to the Fiery X40.**

- **On a UNIX system running Solaris 2.x or any System V implementation of UNIX, use the lp command to send a job to the Fiery X40.**

- **Windows NT 4.0 users with the TCP/IP protocol loaded can send print jobs to the Fiery X40 from their applications or from a command prompt.**

   When Windows NT 4.0 users print from applications, they can set print options with the driver, but not from the UNIX command line.

5

Managing print jobs

UNIX network administrators can use UNIX utilities for viewing the list of jobs, and for printing and removing jobs that are spooled on UNIX servers. If the network includes a Windows NT 4.0 workstation that has TCP/IP protocols loaded, you can use the Command WorkStation or Fiery Downloader to download fonts and files.

You can also use the job management tools to manage jobs from remote workstations. See the *Job Management Guide* for more information.

Even without the Fiery utilities, you can:

• Set up the Fiery X40 to print a log of printed jobs automatically after every 55 jobs (see Job Log Setup on page 3-42).

• Print a Job Log manually at any time from the Command WorkStation Functions menu (see the *Job Management Guide*).

**Chapter 6:
Administering
the Fiery X40**

This chapter provides tips on managing Fiery X40 printing, and includes some troubleshooting hints.

Administrator functions

Administration features are included with the user software and are built into the Fiery X40 itself. The following table describes where to find information on these features (page references refer to this manual).

For these operations:	And these tasks:	See:
Setting up network servers	Setting up servers to manage and share printing services	This manual
Connecting and setting up the Fiery X40	Connecting the Fiery X40 and performing Fiery X40 Setup Setting up the Fiery X40 to allow user access to Fiery WebTools	This manual This manual, *Getting Started,* and *Release Notes*
Setting up the printing environment	Setting printer defaults, including modes, imaging, paper size handling, error handling. Setting copier model-specific options	Printer Setup, page 3-35 and 4-31 PS Setup, page 3-36 and 4-32 *Color Guide* *Printing Guide*
Setting up the job environment	Publishing the Direct connection or the Print queue or Hold queue to end users on various platforms	Printer Setup, page 3-35 and 4-31; Chapter 5
Protecting integrity of users' jobs, maintaining consistency of Fiery X40 settings	Setting the Administrator password	Passwords, page 3-43 and 4-5; Chapter 2
Setting up all new users	Setting up printing, including installing PostScript printer drivers and PPD files for the printer Installing optional user software Installing color reference pages (CMYK swatches, PANTONE Reference, color sample pages) Preparing users to access Fiery WebTools	*Getting Started, Release Notes*

For these operations:	And these tasks:	See:
Getting users started with printing	Printing to the Fiery X40 Setting job-specific options Using Fiery utilities	*Printing Guide* *Job Management Guide*
Controlling the job flow	Using Fiery WebTools, the Command WorkStation and Fiery utilities and for managing job priorities, tracking current jobs, canceling jobs, printing jobs in the Hold queue, reprinting from the Printed or Hold queue	*Printing Guide* *Job Management Guide* *Release Notes*
Job accounting	Viewing, printing, and exporting the Job Log, user notes Setting automatic printing and clearing for the Job Log	*Job Management Guide* page 4-7
Calibration and color management	Printing with CMYK simulations Calibrating the Fiery X40 Printing color samples and swatch pages Installing color profiles	page 3-40 and *Printing Guide* *Color Guide* *Getting Started*
Maintaining optimal Fiery X40 performance	Tips Deleting jobs, clearing queues	page 6-3, also *Job Management Guide*
Troubleshooting	Troubleshooting Fiery X40 Setup Printing, printer, and user software troubleshooting	page 6-4, also *Printing Guide* *Job Management Guide*

Maintaining optimal Fiery X40 performance

The Fiery X40 does not require maintenance. Beyond the obvious requirements of servicing and maintaining the copier and replenishing consumables, there are a few things you can do that will improve the overall performance of your system:

• **Make the best use of your network connections**

 Publish only connections that will be used; the Fiery X40 constantly checks all published connections, even if they are inactive. Match the NetWare polling interval and the number of queues or connections to the demand for printing.

 Review the published connections by printing a Configuration page. Eliminate the connections that are not being used. It is easy to re-establish them when needed.In general, network connections provide far superior throughput than a parallel port connection.

• **Reduce the number of printed pages by choosing not to print a cover page by default unless you need cover pages for recordkeeping**

 Printing a cover page by default is a Printer Setup option.

• **Leave some jobs that are less urgent to times when there is less network traffic or printing**

 Recurring print jobs or jobs that are not urgent can be printed to the Hold queue. At low-traffic times, the administrator or a user of the job management tools with Operator privileges can move (or copy) all the Hold queue jobs to the Print queue for printing.

• **Reduce unnecessary two-way communication**

 Large numbers of users running Fiery utilities, especially with frequent updates, may have a significant effect on Fiery X40 performance.

• **Make sure you have adequate disk space on the Fiery X40**

 Periodically review the list of jobs in the Hold queue, and the number of jobs being retained in the Printed queue.

 An administrator can print or delete jobs that are in the Printed queue and Hold queue. Consider printing or offloading inactive jobs. If disk space on the Fiery X40 is frequently low, you can disable the Printed queue (in Server Setup) and choose not to publish the Hold queue (in Printer Setup).

To move or remove queued jobs, use the job management tools. When you free up disk space by removing inactive jobs, new jobs are spooled and printed more quickly.

Troubleshooting the Fiery X40

Startup diagnostics are described in the *Installation and Service Guide* for service technicians. Contact your authorized service/support center if you see any startup error messages on the Command WorkStation computer or if the Fiery X40 does not reach Idle status.

Troubleshooting during Setup from the Control Panel

The following section explains some error and alert messages that you may see during Setup that might not be self-explanatory.

Network Setup messages

After this Setup screen:	This message:	Means:
Enable AppleTalk (Network Setup>Protocol Setup>AppleTalk Setup)	No AppleTalk zone found.	The Ethernet network cable is not attached to the connector on the Fiery X40, or the network cable is not plugged into the hub or network. If your AppleTalk network has zones, and you want to specify a zone for the Fiery X40, you must connect the network cable to the Fiery X40 before performing AppleTalk Setup. Also could mean that the AppleTalk network doesn't have zones. Zones are not required for printing to the Fiery X40. Press OK to continue.
Protocol Setup or Service Setup (Network Setup)	You must first enable a network port.	Enable at least one network port (Ethernet or Token Ring) in Port Setup before beginning Protocol Setup or Service Setup.

After this Setup screen:	This message:	Means:
Frame Type selection (Network Setup>Protocol Setup>IPX/SPX Setup)	Invalid frame size.	The network hub is not connected to a Novell machine when the Fiery X40 tries to bind.
	Warning! IPX network number is zero.	No other IPX machine can be found on the network, or the network hub is not connected to the network, when the Fiery X40 tries to bind. When this occurs, the network number defaults to zero.
	Can't detect Token Ring hardware. Token Ring hardware not installed or not functioning.	Fiery X40 queries the Token Ring hardware. Error indicates that some components are not installed, are not installed correctly, or not installed in the correct device. An unsupported Token Ring board may be in use. Check with your authorized service/support center.
Token Ring Setup	Can't autodetect the ring speed. No device on ring.	The Fiery X40 is trying to detect the current ring speed, but it is the only machine on the Token Ring network. Connect another machine to the Token Ring network first, before connecting the Fiery X40.
Enable NDS (Network Setup> Service Setup> PServer Setup > NDS Setup)	No NDS trees found.	No NDS trees were found on the Novell network. Check to see that the frame types on the Fiery X40 are properly configured.
Select NDS Tree (Network Setup> Service Setup>PServer Setup> NDS Setup)	Warning! Selecting a new NDS tree deletes Bindery setup.	You have previously connected the Fiery X40 to a different NDS tree. NetWise supports only a single NDS tree connection. To avoid a potential conflict with an existing tree connection (for example, if the connection was made through a NetWare 4.x server in emulation mode), all bindery settings will be deleted. If you choose OK, and choose Yes in the following message screen (Delete Bindery setup and continue?), bindery settings are deleted and have to be re-entered in Bindery Setup. To avoid deleting the bindery settings, press the Menu key, or select OK and choose No in the following message screen (Delete Bindery setup and continue?). Repeat NDS Setup without changing the NDS tree, or exit to Bindery Setup to review your current bindery settings.

After this Setup screen:	This message:	Means:
Navigating NDS tree (Network Setup> Service Setup>PServer Setup> NDS Setup)	___ is empty.	The chosen container contains no sub-containers or objects relevant to the current mode of navigation.
Bindery Setup (Network Setup> Service Setup>PServer Setup> Bindery Setup)	If you also plan to use NDS, set up NDS before Bindery.	No NDS settings are present. You are reminded to perform NDS Setup before Bindery Setup in case your network includes both NDS and bindery servers.
Select File Server From List (Network Setup> Service Setup>PServer Setup> Bindery Setup)	Error. Cannot open bindery connection to NDS server.	Select this server through NDS setup or disable NDS and select it through bindery.
	No NetWare file server found.	No file server was found when Fiery X40 queried the network to create a list of supported servers or a list of all servers. Check cable connections and make sure the NetWare server is turned on.
Enter First Letters of Server Name (Network Setup> Service Setup>PServer Setup> Bindery Setup)	File server name not found. Try again?	No file server with those letters was found when Fiery X40 queried the network. Check the name of the NetWare file server, check cable connections, and make sure the NetWare server is turned on.
View Server List, Edit Connection (Network Setup> Service Setup>PServer Setup> Bindery Setup)	No file server is selected.	No file server has been added in Bindery Setup.
Add File Server (Network Setup> Service Setup>PServer Setup> Bindery Setup)	All connections used. Remove server?	You have added the maximum number of bindery servers, which is eight. You now have the option of disconnecting one of those servers, so as to add another.
Add Server, Enter Your Login Name, Enter Your File Server Password (Network Setup> Service Setup> PServer Setup> Bindery Setup)	No NetWare print server found.	No print server was found when Fiery X40 queried the file server you selected. You must configure a print server and a print queue for every NetWare file server that will handle Fiery X40 print jobs (see page 5-4).

After this Setup screen:	This message:	Means:
Any Bindery Setup screen	Novell error code, followed by a message.	Novell NetWare has reported an error. The Command WorkStation reports the error number and displays a brief message. For the most common errors (listed in the following table), a screen is displayed that enables you to retry the action that evoked the error, such as adding a server. If that is not possible, you are prompted to notify the Novell administrator, who will need to troubleshoot the network. Consult NetWare Administrator documentation for further explanation of Novell error codes.

In Network Setup, when you configure the IPX (Novell) connection, the Fiery X40 queries the network for Novell file servers and trees, and attaches to them temporarily. If a guest login is enabled, it will be used. If not, you'll be prompted to log in from the Command WorkStation.

If the selected NetWare file server or tree does not have a guest account, or if the guest account has expired or has been disabled by the NetWare supervisor, you will be prompted to notify the IPX (Novell) administrator. In that case, there are two options:

• Enable a guest account on the NetWare server or tree for the purpose of setup.

• Log in with a different account. At the ENTER LOGIN NAME screen, change the default name (guest) to supervisor or enter another valid login name. When you are prompted for a password, enter the correct password for the account you named.

For any Novell error, make sure:

• Your IPX (Novell) network is connected to the Fiery X40.

• The NetWare server you are trying to access is running.

• The Novell network has been configured with at least one print server and queue for the Fiery X40.

• You have the appropriate permissions and login information, including username and password, if necessary.

• The Fiery X40 is configured with the correct frame types for communication with the desired Novell servers.

Novell error messages

Novell error:	Cause:	Suggested action or exit:
220 Guest account not available	The guest account, which you have chosen for initial login, has expired or has been disabled by the NetWare supervisor.	Enable a guest account on the NetWare server for the purpose of setup. Alternatively, log in to a different account. In the ENTER LOGIN NAME screen, change the default name (guest) to supervisor or another valid login name. When you are prompted for a password, enter the correct password for the account you named.
222 Unable to log in to server. Password has expired for login name	The server has connected to a file server, but is unable to log in to the file server or print server because the password has expired for the login account name or the named print server.	Select a different login account or print server. The error screen exits to the File Server Login screen (if login to file server failed) or NetWare Print Server screen (if login to Print Server failed). Pressing the Menu button returns to the PServer Setup screen.
252 Unable to log in to server. Login does not exist.	The server has connected to a file server, but is unable to log in to the server because the selected login account does not exist on the file server.	Select a different login account. The error screen exits to the File Server Login screen. Pressing the Menu button returns to the PServer Setup screen.
255 Unable to connect to file server. File server is down or out of connections.	The Novell file server is down or out of connections. This error occurs while the server is trying to connect to the requested file server.	Select a different file server (or try to get someone else to log off). Pressing the Menu button returns to the PServer Setup screen.
nnn Notify IPX (Novell) Administrator.	Indicates other network errors when the Fiery X40 is already connected to a file server. Something unexpected has happened and the user generally cannot recover without intervention of the network administrator. Error #197 indicates that you have exceeded the number of login attempts permitted for this account on the NetWare file server. Error #255 usually indicates a hard failure.	Notify the Novell administrator and report the error number. The error screen exits to the PServer Setup screen.

Runtime error messages

For error messages related to canceling jobs and printing, including the Disk Full message and alerts to load media, see the *Job Management Guide*. These messages are reported by the job management tools.

Users can turn on PostScript error reporting as a print option from Mac OS applications.

Check power and cable

This message indicates that the interface cable between the Fiery X40 and the copier is not connected, or a print job is ready but the copier is not turned on.

Printer not found

Most failures to find a printer on the network are due to conflicting or missing name or address settings for the Fiery X40. You must enter names in specific places. The required names are:

• TCP/IP host name (also known as the DNS name), which is defined by your organization.

   Enter the host name as the Server Name in Fiery X40 Setup.

• Remote printer (internal machine) name. Use one of the following:

   print
   hold

You must reconfigure one of the Fiery utilities on each workstation if you change the DNS name (also known as the TCP/IP host name) of the Fiery X40.

Check the table below for the appropriate name to use.

In this location:	For this item:	IPX/SPX networks:	TCP/IP networks:	See:
Server Setup	Server Name option	Administrator defines name	Administrator defines name	page 3-7
Windows NT hosts file	host name	—	DNS name (TCP/IP host name)	page 5-8
Windows NT setup for TCP/IP	lpd host name	—	DNS name (TCP/IP host name)	page 5-8 and *Getting Started*
	Name of printer on lpd host machine	—	print or hold	
UNIX /etc/printcap file (BSD)	rp line	—	print or hold	page 5-14
Solaris	lpadmin queuename	—	print or hold	
NetWare administration utility	print queues (must be all lowercase and in English)	_direct _print _hold	—	page 5-3
Add New Server dialog box, when configuring a Fiery utility	New Device	X40	X40	*Getting Started*
	Server Name	Server name of Fiery X40 as specified in Setup	DNS name (TCP/IP host name)	

Cannot connect to Fiery X40 with Fiery utilities

If users cannot connect to the Fiery X40, check the following:

- Fiery X40 Setup—the appropriate network protocol must be enabled, with the correct parameters (for example, for TCP/IP, the IP address, etc.; for IPX/SPX, a correct frame type setting), and you must publish either the Print queue or Hold queue.

  Verify that in IPX/SPX Setup the IPX network protocol has bound to all the frame types in use by the NetWare servers that handle Fiery X40 print jobs.

  You can check these settings quickly by printing a Configuration page.

- On the client workstation—the appropriate network protocol(s) must be loaded, and your Windows directory should contain a configured Efinl.ini file.

Cannot connect to the Fiery X40 with the Command WorkStation

If there is a problem connecting to the Fiery X40, an error message is displayed.

The problem can occur:

- When the Fiery X40 is first turned on
- When the Fiery X40 reboots
- When you have changed settings affecting the server address and have not reconfigured the connection to the server.

If you see this problem, try the following solutions, in order:

- A remote workstation running the Fiery utilities or Fiery WebTools may be interfering by obtaining status information. If possible, close the remote application, and try again to connect.

- Restart the Command WorkStation application and try again to connect.

- Check the configuration of the connection and modify it if necessary, or delete the Efinl.ini file and start over with the process of configuring the connection as described in *Getting Started*.

  For Windows 95/98/2000, the Efinl.ini file is located in \WINDOWS.
  For Windows NT 4.0, the Efinl.ini file is located in \WINNT.

- Reboot the Fiery X40.

- See the *Job Management Guide* for information on other error conditions.
Appendix A: Token Ring Network Option

Token Ring is an alternative network architecture to Ethernet architecture. Token Ring networks offer a high resistance to failure and are commonly used in large or high-traffic network installations.

Token Ring networks operate by passing a network token around the electronic equivalent of a ring. The token is a data packet that circulates from one network node to another, controlling access to the network. In practice, each workstation is connected to a port on one or more media attachment units (MAUs) which act as network hubs for the ring connection.

This appendix describes the Token Ring option and cable connections, and refers you to the remaining configuration required for printing to the Fiery X40.

Fiery X40 Token Ring option

The Fiery X40 supports Token Ring networks that use IPX and TCP/IP protocols. To use the Fiery X40 with a Token Ring network, a Token Ring network interface card provided by EFI must be installed in the Fiery X40. You can use either shielded twisted pair (STP) or unshielded twisted pair (UTP) cable.

Connecting Token Ring hardware

The service/support center that installs the Fiery X40 typically also installs the Token Ring option at the same time and configures the Fiery X40 to enable printing.

Back view of the Fiery X40 with the Token Ring option installed

Connectors for Token Ring option
Turn off the Fiery X40 before connecting it to any network device.

NOTE: Do not attach cable to both Token Ring connectors.

TO CONNECT CABLE TO THE FIERY X40:

1. **Turn off the Fiery X40.**

2. **Connect cable from the Token Ring MAU to the Fiery X40 Token Ring card.**

   Configure the NetWare, Windows NT, or UNIX server to print to the Fiery X40 (see the next two sections). Then proceed to page 3-2 for Fiery X40 Setup.

IPX/SPX installations

If your network uses IPX/SPX protocols with Token Ring, configure at least one printer, one Fiery X40 Print Server, and one Fiery X40 Print Queue on the NetWare server as described in "Configuring a NetWare 3.x or 4.x server for printing" on page 5-4. You can configure up to eight bindery servers and one NDS tree connection to the Fiery X40. This total is the same whether the Fiery X40 is connected by Token Ring, by Ethernet, or by both. For more information, see "Setting up an NDS connection" on page 5-6.

TCP/IP installations

If your network uses TCP/IP protocols with Token Ring, configure at least one printer and one Fiery X40 queue on a Windows NT server (see "Configuring a Windows NT 4.0 server to support the Fiery X40" on page 5-9), or on a UNIX server (see "Setting up the Fiery X40 on TCP/IP networks" on page 5-15).

Setting up Token Ring on the Fiery X40

Token Ring Setup on the Control Panel is similar to Ethernet Setup. From Network Setup, perform Port Setup, Protocol Setup, and Service Setup. The setups you need are summarized in the table on page 3-9.

NOTE: Connect the Token Ring cable before doing Fiery X40 Network Setup, so that the Token Ring card can configure itself properly.

Setting up NetWare Windows clients

Client setup is exactly the same as for IPX clients using Ethernet. See "Setting up NetWare Windows clients for printing" on page 5-7 for details.
