FreeFlow Accxes HP-GL/2 Driver Customer Release Notes

Version 13.0.5

Release Content

This 13.0.5 release is provided on a CD with English, German, French, Italian, Spanish, and Portuguese languages.

The CD format is different from previous customer CDs. For Windows 2000 systems, use the “Win2k” folder. For Windows XP and newer operating systems, use either the 64Bit or 32Bit folder.

New or Changed in this Release

The following is new or changed

- Support for the Xerox 6279 Wide Format printer has been added.
- Support for IPV6 has been added to the Windows Vista and newer versions

Known Issues

Last Active Tab

The Last Active Tab feature does not work from within applications; this is a limitation of Windows.

Vista and Server 2008 Help

The “?” button in the tabs and dialogs is not supported in Vista and Server 2008. However, selecting a control and pressing F1 will bring up the help (for controls which the user can interact with).

User defined media sizes

You cannot save a user defined size within an application. The user defined size has to be created and saved in the driver’s printing preferences.

Internet Protocol version 6

This is only recommended with Microsoft Windows Vista and Microsoft Server 2008. It is not supported in Windows 2000 or Windows XP.

Printer Driver Installation

New driver install:

Follow the procedure in the Xerox Wide Format with FreeFlow Accxes clients & drivers installation guide.

Existing drivers:

All previous versions of Wide Format HP-GL/2 drivers must be removed from the server and/or workstation client before installing this new driver. This includes deleting the printer icon, deleting any xes net ports, removing the driver and then rebooting the operating system. Then, follow the procedure in the Xerox Wide Format with FreeFlow Accxes clients & drivers installation guide.

Using Standard TCP/IPv6:

This driver supports the use of IPv6 on Vista and Server 2008.
