

September 2001

The following document describes the various PC utilities available the CSX2000.

Note: These utilities are also located in the Shared utilities folder on the CSX2000 Color Server.

Some of the utilities are compressed in ZIP format.

AdobePS Driver.exe

Installs the universal Adobe PostScript Printer driver.

Adobe Reader Installer

This application allows you to install Adobe Acrobat Reader (version 4.0) on your PC.

Screen Saver

This plugin allows you to run the Spire screen saver on your PC.

For Adobe Acrobat

CreoScitex Spot Colors™ Acrobat Plug-In v1.0

The CreoScitex Spot Colors Plug-In for Adobe Acrobat lets you interactively manipulate spot colors and their related parameters in PDF documents. It is similar to the CreoScitex Spot Colors XTension for QuarkXPress. There are two versions of the Plug-In, one for Macintosh and one for Windows.

The CreoScitex Spot Colors Plug-In does not actually change the color data in a PDF. Instead, it adds additional data that can modify the behavior of a CreoScitex RIP.

For PhotoShop

PSImage Exporter

CreoScitex PSImage Exporter™ is an Adobe Photoshop® plug-in developed by CreoScitex that enables you to export images from Adobe Photoshop in PSImage™ format for use in CreoScitex automatic picture replacement (CreoScitex APR™).
