

This package will install 10.7 Print Drivers for Splash.

EFI has delivered a basic GUI implementation of the driver that can be used on Mac OSX 10.7. Included in the installer package for this release are the following PPD's:

Splash RPX-ii 250-240
Splash RPX-ii 260-252-242
Splash RPX-ii 5065
Splash RPX-ii 6075-5065 II
Splash RPX-ii DocuColor 5000
Splash RPX-iii Xerox 700

This is a PPD-only solution with a very basic GUI. The PPD-only solution has most of the job properties, but not all of them. The following features were not available in this driver released for 10.6 and also will not be available for 10.7:

- Expert color settings window (although the color settings are available separately)
- Two way communication with the Splash server
- Printer info (paper tray information and toner levels)
- Image shift
- Mixed media
- Schedule job
- Job notes information (user name, password, comment, account, secure printing)
