## Accessing Extended Features

### Overview

This document describes how to access the extended features of the WorkCentre 57xx Series in environments for which Xerox does not make a custom driver.

**Note:** Some of the commands and syntax used in this document requires familiarity with either PostScript (PS) or Printer Command Language (PCL).

This document provides the Printer Description Language (PDL) commands and syntax for each feature. The following tables are also included:

- features supported by the WorkCentre 57xx Series
- commands to use in a PCL print job
- commands to use in a PS print job

This document is not intended as a PS or PCL reference manual, but a guide for using the extended features in PS, PCL or ASCII print jobs.

### Using this Guide

1. Refer to the Feature List for the feature you wish to implement. Select the page number to jump to that page.
2. Follow the syntax listed for the command you selected. Read the “Dependencies/Caveats” section. You can access features using several methods:
  - PCL or PS commands
  - PJL SET commands
  - Xerox specific COMMENT command.

### Feature Listing

PCL and ASCII print jobs can use PJL commands or PCL commands to access the attributes of the device. If there is more than one method listed to access a specific feature, determine the best method for your application and use that method.

PostScript print jobs can use Document Structuring Commands (DSC) or PS commands. If there is more than one method listed to access a specific feature, determine the best method for your application and use that method.

For this document, both PJL COMMENT and DSC are referred to as Comment commands.

## Getting Started

PCL and ASCII print jobs can use PJL commands or PCL commands to access the attributes of the device. If there is more than one method listed to access a specific feature, determine the best method for your application and use that method.

### Comment Commands

To process all PJL COMMENT commands and DSC, enclose them with XRXBegin and XRXEnd commands. The following example shows a PCL or ASCII print job:

```
@PJL COMMENT XRXbegin  
@PJL COMMENT OID_ATT_START_SHEET OID_VAL_JOB_SHEET_NONE;  
@PJL COMMENT XRXend
```

This example shows a PS print job:

```
%%XRXbegin  
%%OID_ATT_START_SHEET OID_VAL_JOB_SHEET_NONE;  
%%XRXend
```

- The first parameter of the command is an attribute followed by a value.
- Comment commands must end with a semicolon except for the XRXbegin and XRXend commands.
- A comment command not enclosed by XRXbegin and XRXend is NOT a Xerox specific command and is treated as a real comment with no functional attachment to its contents.
- The comment commands are specific to the WorkCentre 57xx Series.

### PJL SET Commands

PJL SET commands are available for some features. If you choose to use these commands, do not enclose them with the XRXBegin and XRXEnd commands.

PJL SET commands do not require a semicolon at the end of the command line.

### PCL Commands

PCL commands are available for some features. If you choose to use these commands do not enclose them with the XRXBegin and XRXEnd commands. Refer to a PCL reference manual for more specific information regarding PCL commands.

### PS Commands

PS commands are for some features. If you choose to use these commands, do not enclose them with the XRXBegin and XRXEnd commands. Refer to a PS reference manual for more specific information regarding PS commands.

<b>XRXBegin</b>	
When the interpreter receives this command it begins to parse PJL COMMENT commands to check for Xerox-specific commands until it receives the command to stop parsing.	
<b>PJL COMMENT Command</b>	<b>DSC Comment Command</b>
@PJL COMMENT XRXbegin	%%XRXbegin

<b>XRXEnd</b>	
When the interpreter receives this command it stops parsing PJL COMMENT commands.	
<b>PJL COMMENT Command</b>	<b>DSC Comment Command</b>
@PJL COMMENT XRXend	%%XRXend

## General Comment Commands

<b>JOB NAME</b>	
The value for Job Name is stored for printing on the banner page.	
<b>PJL COMMENT Command</b>	<b>DSC Comment Command</b>
@PJL COMMENT JOB NAME=" <i>string</i> ";	%%OID_ATT_JOB_NAME=" <i>string</i> ";
Where <i>string</i> is a maximum of 40 characters. This appears as the first item on the banner sheet.	

<b>JOB OWNER</b>	
The value for Job Owner is stored for printing on the banner page.	
<b>PJL COMMENT Command</b>	<b>DSC Comment Command</b>
@PJL COMMENT OID_ATT_JOB_OWNER " <i>string</i> ";	%%OID_ATT_JOB_OWNER " <i>string</i> ";
Where <i>string</i> is a maximum of 40 characters. This appears as the second item on the banner sheet.	

<b>COPIES</b>		
With COPIES specified, the device renders X number of copies of page 1 of the document, X number of copies of page 2, and so on. Use the COLLATION command in conjunction with the COPIES command to set a collate value.		
<b>PJL SET</b>	<b>PCL Cmd</b>	<b>PS Cmd</b>
@PJL SET COPIES= <i>int</i> ;	<esc>&! <i>int</i> X	<</NumCopies <i>int</i> >> setpagedevice or <i>int</i> /languagelevel where {pop languagelevel}{1} ifelse 2 ge { 1 dict dup /NumCopies 4 - 1 roll put setpagedevice }{ userdict /#copies 3 -1 roll put } ifelse
Where <i>int</i> is 1 to 9999.		

<b>JOB TYPE</b>	
The Job Type command indicates a job that requires special handling.	
<b>PJL COMMENT Command</b>	<b>DSC Comment Command</b>
@PJL COMMENT OID_ATT_JOB_TYPE OID_VAL_JOB_TYPE_ <i>string</i> ;	%%OID_ATT_JOB_TYPE OID_VAL_JOB_TYPE_ <i>string</i> ;
Where <i>string</i> is one of the following:	
PRINT	Indicates a normal print job.
PROOF_PRINT	Comparable to Sample Set in a driver. This job type allows you to specify multiple copies with the @PJL SET COPIES command. One set prints for review. Then you can release or delete the job.
FAX_SEND	This job type directs a print job to use the embedded fax board and fax the job to a phone number instead of printing the job. See the FAX SEND command for the commands to provide the phone number and other fax options.

<b>DELAY PRINT</b>	
Delays printing a job until the time specified by the command.	
<b>PJL COMMENT Command</b>	<b>DSC Comment Command</b>
@PJL COMMENT OID_ATT_JOB_PRINT_AFTER “ <i>yyyymmddhhmmss</i> ”;	%%OID_ATT_JOB_PRINT_AFTER “ <i>yyyymmddhhmmss</i> ”;
Where <i>yyyy</i> =year, <i>mm</i> =month, <i>dd</i> =day, <i>hh</i> =hours, <i>mm</i> =minutes, <i>ss</i> =seconds	

<b>FAX SEND</b>	
Must use with the FAX_SEND Job Type command. This command is only valid for devices that have a fax from the PC desktop function. The WC/WC Pro 2xx series fax-enabled systems support the FAX_SEND job type.	
Minimum commands required to send a simple fax job are shown in the next sections of this table. The commands that follow are optional.	
<b>Required Commands</b>

<pre>@PJL COMMENT OID_ATT_CREDIT_CARD "xxxx";</pre> Where <b>xxxx</b> is the credit card or charge code required to send the fax. Select this option and enter the credit card number (up to 16 digits) if you want to charge the fax call to a credit card. The credit card number is concealed on confirmation reports.	
Characters for phone numbers, prefix numbers, credit cards, and other numeric entries. = Wait for dial tone. ! Used to designate a mailbox signal. , Used to initiate a pause period; default pause period is 3 seconds. / Used to delineate private data. \$ Signifies to wait for a confirmation dial tone. <1> Use preceding a fax number to specify which fax line should be used on systems that support dual fax lines. <2> Use preceding a fax number to specify which fax line should be used on systems that support dual fax lines.	

## BANNER SHEET (START SHEET)

This command turns on/off the banner sheet that prints at the beginning of every job. It only applies to the job that contains the command; it does not affect any other jobs. If the device is configured to disable banner sheets, this command is ignored.

PJL COMMENT Command	DSC Command
@PJL COMMENT OID_ATT_START_SHEET OID_VAL_JOB_SHEET_“ <i>string</i> ”;	%%OID_ATT_START_SHEET OID_VAL_JOB_SHEET_“ <i>string</i> ”;
Where <i>string</i> is:	
NONE	Do not create a banner sheet for this job.
FULL	Create a banner sheet for this job. By default, if the START SHEET comment is not included a banner sheet is generated unless the device has banner sheet disabled.
USER	A custom start sheet is included in this job.

**NOTE:** When sending a job with a media size, there must be a MEDIA COLOUR "Unspecified" and MEDIA TYPE "Unspecified" PJL COMMENT command issued in the PDL.

<b>MEDIA TYPE</b>			
Media types are used to distinguish the type of media a job requires. If using the Media Source command, set the Media Type command to Unspecified.			
<b>PJL COMMENT Command</b>		<b>DSC Comment Command</b>	
@PJL COMMENT OID_ATT_DEFAULT_MEDIUM_TYPE "String";		%%OID_ATT_DEFAULT_MEDIUM_TYPE "String";	
Where <b>string</b> is one of the following:

## Formatting Comment Commands

<b>COLLATION</b>	
This attribute controls the collation status of the output. COLLATE results in sets of pages, for example two copies of a 3-page job results in pages 1 through 3 printed, then pages 1 through 3 printed again. NO_PAGE COLLATE results in page 1 printing twice, page 2 printing twice and page 3 printing twice.

## PJL/PCL Dependencies/Caveats

- Locate all PJL commands in the first 64KB of the job.
- To combine printer escape commands (not including PJL commands):
  - The first two characters after the <esc> MUST be the same.
  - All alpha characters MUST be lowercase, except the final terminating character.
  - The commands are read left to right. Combine them in the order you wish them executed.  
For example, print 5 copies (<ESC>&15X) and use letter size (<ESC>&12A) is combined as: <ESC>&15x2A
- In case of duplicate commands, the last one requested takes precedence.
- The @PJL SET COPIES takes precedence over the PCL Escape Command (<ESC> & 1 int X) to determine number of copies. In general, a PJL command takes precedence over a PCL command.
- When printing a job with an odd number of pages and duplex front and back imaged covers, the printer always prints on both sides of the front and back covers. The remaining pages are printed on the document body media type and color with a blank page inserted to allow an image on both sides of the back cover.
- When using the Blank Front or the Blank Front & Back Cover command, the Cover Media Size command is optional. If the cover size command is not in the PDL, the printer assumes the cover media size is the same as the document body.
- Use one of the following methods to specify media selection:
  - Describe the media attributes with size, color, and type and allow the device to select the matching source tray. If the media description method is used, leave source tray selection out of the request or set to Auto. If not, the tray selection defeats the auto tray selection capabilities of the device.
  - Indicate the tray to supply media. If the source tray method is used, the system automatically defaults paper type to the defined SYSTEM DEFAULT unless specified otherwise. This prevents inadvertent use of special paper types. To override, include a paper type specification of UNSPECIFIED in the job.

## DSC/PS Dependencies/Caveats

- All % % commands (DSC comments) must be in the first 64KB of the job.
- WorkCentres supports PostScript resolutions up to and including 1800 x 1800. Some PostScript jobs may not print if the high resolution is indicated. If this occurs, print the same job at a lower resolution.
- The following media sizes do not print duplex and do not support staple commands: A6, B6, 5 x 7" Postcard (4.5 x 6"), envelopes and any custom sized media where the page width is less than 5.5". A request to duplex or staple these media sizes is ignored.
- Jobs that indicate Transparencies, Labels, Envelopes or Tab-Stock do not support duplex commands. The duplex print request is ignored when any of these media types are used.
- When printing an odd number of pages in a document with duplex front and back imaged covers, the printer always prints on both sides of the front and back covers. The remaining pages print on the document body media type and color with a blank page inserted to allow an image on both sides of the back cover.
- When using the Blank Front or the Blank Front and Back Cover command, the Cover Media Size command is optional. If the Cover Media Size command is not in the PDL, the printer assumes the cover media size as that of the document body.
- Use one of the following methods to specify media selection:
  - Describing the media attributes with size, color, and type and allowing the device to select the matching source tray. If the media description method is used, leave source tray selection out of the request or specifically set to Auto. Otherwise, the tray selection defeats the auto tray selection capabilities of the device.
  - Specifically indicate the tray to feed from. If the source tray method is used, the system automatically defaults paper type to the defined SYSTEM DEFAULT unless specified otherwise. This occurs to prevent inadvertent use of special paper types. To override, include a paper type specification of UNSPECIFIED in the job.

## Sample PCL Headers

Note: This section is only an example that may include features and commands that do not exist for this product.

### Example 1 Header for Simple Print

```
<ESC>%-12345X@PJL JOB  
@PJL SET COPIES= 1  
@PJL COMMENT XRXbegin  
@PJL COMMENT OID_ATT_JOB_OWNER "John Smith";  
@PJL COMMENT OID_ATT_JOB_NAME "Print Job";  
@PJL COMMENT XRXend

<ESC>%-12345X
```

**Note:**

This is a simple print job header specifying the Job Owner and Job Name and one copy.

The quotations in the Job Owner and Job Name lines are required.

**Note:**

This is a proof print job header that requests 6 copies.

### Example 2 Header for Proof Print

```
<ESC>%-12345X@PJL JOB
