| Language Support | Brazilian-Portuguese, English, French, Italian, German, Spanish, Russian | |

Notes

- The version 12.1 of the "Scan To PC Desktop 12" products are replacing the original 12.0 deliveries and it fixes the JBIG2 issue in the different components of S2D12 including SE flavors of the PaperPort and OmniPage components.
The patch should be applied when a S2D v12.0 product is installed on a computer.

This v9 version of the SE patch should be able to apply to the 3 PE builds created for the Provence device.
